Valavanis,Randal Beard,Paul Oh,Aníbal Ollero,Leslie A. Piegl,Hayong Shin,2011-04-11 In the last decade significant changes have occurred in the field of vehicle motion planning and for UAVs in particular UAV motion planning is especially difficult due to several complexities not considered by earlier planning strategies the increased importance of differential constraints atmospheric turbulence which makes it impossible to follow a pre computed plan precisely uncertainty in the vehicle state and limited knowledge about the environment due to limited sensor capabilities These differences have motivated the increased use of feedback and other control engineering techniques for motion planning The lack of exact algorithms for these problems and difficulty inherent in characterizing approximation algorithms makes it impractical to determine algorithm time complexity completeness and even soundness This gap has not yet been addressed by statistical characterization of experimental performance of algorithms and benchmarking Because of this overall lack of knowledge it is difficult to design a guidance system let alone choose the algorithm Throughout this paper we keep in mind some of the general characteristics and requirements pertaining to UAVs A UAV is typically modeled as having velocity and acceleration constraints and potentially the higher order differential constraints associated with the equations of motion and the objective is to guide the vehicle towards a goal through an obstacle field A UAV guidance problem is typically characterized by a three dimensional problem space limited information about the environment on board sensors with limited range speed and acceleration constraints and uncertainty in vehicle state and sensor data *Springer Handbook of Automation* Shimon Y. Proceedings ,1997 Markov Decision Processes in Artificial Intelligence Olivier Sigaud,Olivier Buffet,2013-03-04
Markov Decision Processes MDPs are a mathematical framework for modeling sequential decision problems under uncertainty as well as reinforcement learning problems Written by experts in the field this book provides a global view of current research using MDPs in artificial intelligence It starts with an introductory presentation of the fundamental aspects of MDPs planning in MDPs reinforcement learning partially observable MDPs Markov games and the use of non classical criteria It then presents more advanced research trends in the field and gives some concrete examples using illustrative real life applications *In-Flight Simulators and Fly-by-Wire/Light Demonstrators* Peter G. Hamel,2017-03-15 This book offers the first complete account of more than sixty years of international research on In Flight Simulation and related development of electronic and electro optic flight control system technologies Fly by Wire and Fly by Light They have provided a versatile and experimental procedure that is of particular importance for verification optimization and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems Extensive coverage is given in the book to both fundamental information related to flight testing and state of the art advances in the design and implementation of electronic and electro optic flight control systems which have made In Flight Simulation possible Written by experts the respective chapters clearly show the interdependence between various aeronautical disciplines and in flight simulation methods Taken together they form a truly multidisciplinary book that addresses the needs of not just flight test engineers but also other aeronautical scientists engineers and project managers and historians as well Students with a general interest in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful The omission of mathematical equations and in depth theoretical discussions in favor of fresh discussions on innovative experiments together with the inclusion of anecdotes and fascinating photos make this book not only an enjoyable read but also an important incentive to future research The book translated from the German by Ravindra Jategaonkar is an extended and revised English edition of the book *Fliegende Simulatoren und Technologietrends* edited by Peter Hamel and published by Appelhans in 2014 **20th DASC** ,2001 **Scientific and Technical Aerospace Reports** ,1995 **Monthly Catalogue, United States Public**
