Casanova ,2018-09-14 Volume I entitled Augmentation of Brain Functions Brain Machine Interfaces is a collection of articles on neuroprosthetic technologies that utilize brain machine interfaces BMIs BMIs strive to augment the brain by linking neural activity recorded invasively or noninvasively to external devices such as arm prostheses exoskeletons that enable bipedal walking means of communication and technologies that augment attention In addition to many practical applications BMIs provide useful research tools for basic science Several articles cover challenges and controversies in this rapidly developing field such as ways to improve information transfer rate BMIs can be applied to the awake state of the brain and to the sleep state as well BMIs can augment action planning and decision making Importantly BMI operations evoke brain plasticity which can have long lasting effects Advanced neural decoding algorithms that utilize optimal feedback controllers are key to the BMI performance BMI approach can be combined with the other augmentation methods such systems are called hybrid BMIs Overall it appears that BMI will lead to many powerful and practical brain augmenting technologies in the future

The Cognitive, Emotional and Neural Correlates of Creativity Matthijs Baas,Carsten K. W. De Dreu,Bernard A. Nijstad,2015-08-06 Across species humans have an unsurpassed capacity for creative thought and innovation Human creativity is at the roots of extraordinary achievements in the arts and sciences and enables individuals and their groups to adapt flexibly to changing circumstances to manage complex social relations and to survive and prosper through social technological and medical innovations The ability to generate novel and potentially useful ideas and problem solutions viz creativity is a key driver of human evolution and among the most valued and sought after competencies in contemporary societies that struggle with complex problems and compete for technological and economic supremacy Because creativity provides fitness functionality in both ancestral and contemporary societies it stands to reason that i the human brain evolved to sustain and promote creative thinking and we should be able to identify ii the brain circuitries genetic drivers and neurohormonal modulators of the human capacity for creative problem solving and original ideation and iii the core cognitive and emotional processes underlying creative thought In this Research Topic we bring together a collection of papers to

abdomen Magnetic field produced by the electrical activity in the heart and brain of the fetus is not attenuated by the vernix a waxy film covering its entire skin A biomagnetic instrument specifically designed for fetal studies has been developed for this purpose Fetal MEG studies using such a system have shown that both spontaneous brain activity and evoked cortical activity can be measured from outside the abdomen of pregnant mothers Fetal MEG may become clinically very useful for implementation and evaluation of intervention programs in at risk populations Biomagnetic instruments have also been developed for specifically measuring the brain activity in newborns infants and older children MEG studies have shown the usefulness of MEG for localizing active regions in the brain and also for tracking the longitudinal maturation of various sensory systems Studies of pediatric patients are beginning to show interesting functional pathology in autism spectrum disorder cerebral palsy epilepsy and other types of neurological and psychiatric disorders Down syndrome traumatic brain injury Tourette syndrome hearing deficits childhood migraine In this eBook we compile the state of the art MEG and other neuroimaging studies focused on pediatric population in both health and disease We believe a review of the recent studies of human brain development using MEG is quite timely since we are witnessing advances not only in the instrumentation optimized for the pediatric population but also in the research based on various types of MEG systems designed for both human fetuses in utero and neonates and older children
