It demonstrates that the often complex and fragmentary glacial sedimentary record can when examined systematically and rationally provide detailed insights into former environments and climates in places where no other evidence is available. The complementary techniques covered in this book include facies description, grain size analysis, clast form assessment, clast macrofabric analysis, micromorphology, particle lithology, and assessment of engineering properties. They yield consistent and meaningful results in a range of glacial depositional environments throughout the world from the high Arctic to the Himalayas.
