Knowledge John Loughran, Amanda Berry, Pamela Mulhall, 2012-07-31 There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of and response to the relationships between knowledge of content teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge for many teachers is tacit. Pedagogical Content Knowledge (PCK) offers one way of capturing, articulating and portraying an aspect of the scholarship of teaching and in this case the scholarship of science teaching. The research underpinning the approach developed by Loughran, Berry and Mulhall offers access to the development of the professional knowledge of science teaching in a form that offers new ways of sharing and disseminating this knowledge. Through this Resource Folio approach comprising CoRe and PaP eRs, a recognition of the value of the specialist knowledge and skills of science teaching is not only highlighted but also enhanced. The CoRe and PaP eRs methodology offers an exciting new way of capturing and portraying science teachers' pedagogical content knowledge so that it might be better understood and valued within the profession. This book is a concrete example of the nature of scholarship in science teaching that is meaningful, useful and immediately applicable in the work of all science teachers: preservice, in-service and science teacher educators. It is an excellent resource for science teachers as well as a guiding text for teacher education. Understanding teachers' professional knowledge is critical to our efforts to promote quality classroom practice. While PCK offers such a lens, the construct is abstract. In this book, the authors have found an interesting and engaging way of making science teachers' PCK concrete, useable and meaningful for researchers and teachers alike. It offers a new and exciting way of understanding the importance of PCK in shaping and improving science teaching and learning. Professor Julie Gess-Newsome, Dean of the Graduate School of Education, Willamette University. This book contributes to establishing CoRes and PaP eRs as immensely valuable tools to illuminate and describe PCK. The text provides concrete examples of CoRes and PaP eRs completed in real-life teaching situations that make stimulating reading. The authors show practitioners and researchers alike how this approach can develop high-quality science teaching. Dr Vanessa Kind, Director, Science Learning Centre, North East School of Education, Durham University.

Genetic Eye Diseases Elias I Traboulsi, Med, Virginia Miraldi Utz, Department Chair Pediatric & Neuro-Ophthalmology Arif O Khan, 2025-08-22 Since the publication of the Human Genome Project in 2001 and the development of Genome Wide Association Studies GWAS there has been a major shift toward large scale international collaboration in genetic eye disease research Eye researchers involved in genetics have now joined forces with traditional epidemiologists to develop the field of genetic epidemiology Whilst ophthalmic geneticists had focused on rare pathogenic variants mutations with strong effects epidemiologists had focused on common gene variants with small but additive effects see Figure 1 These two areas have now merged identifying a spectrum of genetic variants that are rare intermediate or common with strong medium or mild pathogenicity

Stalinist Genetics Dmitri Stanchevici, 2017-03-02 Stalinist Genetics focuses on the rhetoric of T D Lysenko the founder of an agrobiological doctrine Lysenkoism in the Stalinist Soviet Union Using not only scientific but also political and ideological arguments Lysenko achieved an official ban on Soviet Mendelian genetics Though the ban was brief and Lysenkoism as a leading biological doctrine was eventually deposed in favor of Mendelism Lysenkoism remains a paradigmatic example of pernicious political interference in science In this study the critical orientation for reading Lysenko s major speeches is constitutional rhetoric It combines Kenneth Burke s dialectic of constitutions and rhetoric of the subject Painting a nuanced picture of intellectual economic ideological and political life in the Soviet Union of the 1930s and 1940s the book demonstrates how the rhetorics of Lysenkoism and Mendelism interacted with Stalinist culture in the fight for dominating Soviet science The reader will learn how Lysenko s constitutional rhetoric created a space where scientific terms transformed into political and ideological ones and vice versa The book also shows how in a dialectical flip the Lysenkoist rhetoric eventually turned from tool to master Contrary to Lysenko s intentions his language gave his opponents Soviet Mendelians grounds on which to defend their science and criticize Lysenkoism Stanchevici forcefully reasserts the blurriness of the boundaries between science and politics and argues that scientific language reveals more plasticity and adaptability to the political situation than has hitherto been assumed Intended Audience Scholars in rhetoric history and philosophy of science graduate or upper division undergraduate course in the rhetoric of science or technical communication
