c. *Perimeter delivery systems.* Perimeter systems usually employ the outside wall delivery system. Air returns to the furnace through centrally located, high sidewall or ceiling grilles. Return ducts may be located in attics or other unheated spaces. Return air may be taken from crawl spaces and basements, but never from a confined space in which the

furnace is located. In perimeter systems, a downflow furnace is normally used. In this type furnace, cold air enters the unit from above and is discharged as warm air from the bottom or lower part of the furnace casing. Figure 6-4 illustrates one type of perimeter system called a loop system.
