

The Hydrogen Atom – Student Challenge

Background Material

Classically, read the background information on Energy Levels, Light, and Transitions, and answer the following questions as clearly (and briefly) as possible.

Question 1: Compare the following table which compares how the Bohr Model and the Quantum Mechanical approach the Hydrogen atom. In what “interesting” facts describe things in the model you think are interesting that it does.

Concept	Bohr Model	Quantum Model
Electrons	positively charged particles in the center	positively charged proton in the center
Electrons	orbiting electrons	negatively charged cloud
Orbitals	Electrons do not move in any one orbitally path	Electrons follow complex orbital paths
Transitions of electrons to the next orbital	using a formula to find the radius	Quantum wave
Energy of the electron levels	$E_n = -13.6 \text{ eV} / n^2$ 13.6 eV	It is different

Question 2: Compare the following table which compares the properties of two different elements by adding their appropriate relationships. What does this accomplish for you? (It will prove how it helps to understand whether frequency, wavelength, and the same relationship throughout an entire photon?)
