Additive Combinatorics Terence Tao, Van H. Vu, 2006-09-14 Additive combinatorics is the theory of counting additive structures in sets. This theory has seen exciting developments and dramatic changes in direction in recent years thanks to its connections with areas such as number theory, ergodic theory and graph theory. This graduate level 2006 text will allow students and researchers easy entry into this fascinating field. Here the authors bring together in a self contained and systematic manner the many different tools and ideas that are used in the modern theory presenting them in an accessible coherent and intuitively clear manner and providing immediate applications to problems in additive combinatorics. The power of these tools is well demonstrated in the presentation of recent advances such as Szemerédi's theorem on arithmetic progressions, the Kakeya conjecture and Erdős distance problems and the developing field of sum product estimates. The text is supplemented by a large number of exercises and new results.

Mathematics and Methodology for Economics Wolfgang Eichhorn, Winfried Gleichner, 2016-02-11 This book about mathematics and methodology for economics is the result of the lifelong experience of the authors. It is written for university students as well as for students of applied sciences. This self contained book does not assume any previous knowledge of high school mathematics and helps understanding the basics of economic theory building. Starting from set theory it thoroughly discusses linear and non linear functions, differential equations, difference equations and all necessary theoretical constructs for building sound economic models. The authors also present a solid introduction to linear optimisation and game theory using production systems. A detailed discussion on market equilibrium in particular on Nash Equilibrium and on non linear optimisation is also provided. Throughout the book the student is well supplied with numerous examples, some 2000 problems and their solutions to apply the knowledge to economic theories and models.
