

$$b^2 - 4(ac)$$

Understanding the Discriminant

Find the value of the discriminant of each quadratic equation.

1) $6p^2 - 2p - 3 = 0$

$$4 - 4(-18)$$

$$4 + 72 = \boxed{76}$$

2) $-2x^2 - x - 1 = 0$

$$1 - 4(2)$$

$$1 - 8 = \boxed{-7}$$

3) $-4m^2 - 4m + 5 = 0$

$$16 - 4(-20)$$

$$16 + 80 = \boxed{96}$$

4) $5b^2 + b - 2 = 0$

$$1 - 4(-10)$$

$$1 + 40 = \boxed{41}$$

5) $r^2 + 5r + 2 = 0$

$$25 - 4(2)$$

$$25 - 8 = \boxed{17}$$

6) $2p^2 + 5p - 4 = 0$

$$25 - 4(-8)$$

$$25 + 32 = \boxed{57}$$

Find the discriminant of each quadratic equation then state the number of real and imaginary solutions.

7) $9n^2 - 3n - 8 = -10$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12)$$

$$9 - 48 = -39$$

$$-39 < 0$$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12)$$

$$9 - 48 = -39$$

$$-39 < 0$$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

8) $-2x^2 - 8x - 14 = -6$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8)$$

$$64 - 32 = 32$$

$$32 > 0$$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8)$$

$$64 - 32 = 32$$

$$32 > 0$$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

Topics In Theoretical Physics - Proceedings Of The Second Pacific Winter For Theoretical Physics Yongmin Cho,1997-04-01 Recently exciting new notions have been emerging in theoretical physics The quantum nature of gravitation revealed in the physics of black holes exotic excitations obeying fractional statistics and integrable structure such as Yangian symmetry in low dimensional models are some of the subjects presented in this volume The spectrum of the talks at the School reflected in the proceedings is a wide one ranging from the phenomenology of particle physics to that of condensed matter physics to topics of a mathematical nature This is an indication that there is a robust interplay of ideas from diverse disciplines of theoretical physics in the Asia Pacific region **Metrisable Barrelled Spaces** J C Ferrando,M Lopez Pellicer,L M Sanchez Ruiz,1995-09-28 This text draws together a number of recent results concerning barrelled locally convex spaces from general facts involving cardinality and dimensionality to barrelledness of some familiar vector valued or scalar valued normed spaces of functional analysis and providing a study of some of these spaces Throughout the exposition the authors show the strong relationship between barrelledness properties and vector valued measure theory

Frankiewicz,P. Zbierski,1994-02-23 Gaps and limits are two phenomena occurring in the Boolean algebra $P(\mathbb{N})$ Both were discovered by F Hausdorff in the mid 1930 s This book aims to show how they can be used in solving several kinds of mathematical problems and to convince the reader that they are of interest in themselves The forcing technique which is not commonly known is used widely in the text A short explanation of the forcing method is given in Chapter 11 Exercises both easy and more difficult are given throughout the book

Mathematical Masterpieces Art Knoebel,Reinhard Laubenbacher,Jerry Lodder,David Pengelley,2007-10-16 In introducing his essays on the study and understanding of nature and evolution biologist Stephen J Gould writes We acquire a surprising source of rich and apparently limitless novelty from the primary documents of great thinkers throughout our history But why should any nuggets or even akes be left for intellectual miners in such terrain Hasn't the Origin of Species been read untold millions of times Hasn't every paragraph been subjected to overt scholarly scrutiny and exegesis Letmeshareasecretrooted ingeneralhumanfoibles Veryfew people including authors willing to commit to paper ever really read primary sources certainly not in necessary depth and completion and often not at all I can attest that all major documents of science remain cho full of distinctive and illuminating novelty if only people will study them in full and in the original editions Why would anyone not yearn to read these works not hunger for the opportunity 99 p 6f It is in the spirit of Gould's insights on an approach to science based on primary texts that we offer the present book of annotated mathematical

sources from which our undergraduate students have been learning for more than a decade Although teaching and learning with primary historical sources require a commitment of study the investment yields the rewards of a deeper understanding of the subject an appreciation of its details and a glimpse into the direction research has taken Our students read sequences of primary sources

Continuous Symmetries and Integrability of Discrete Equations Decio Levi, Pavel Winternitz, Ravil I. Yamilov, 2023-01-23 This book on integrable systems and symmetries presents new results on applications of symmetries and integrability techniques to the case of equations defined on the lattice This relatively new field has many applications for example in describing the evolution of crystals and molecular systems defined on lattices and in finding numerical approximations for differential equations preserving their symmetries The book contains three chapters and five appendices The first chapter is an introduction to the general ideas about symmetries lattices differential difference and partial difference equations and Lie point symmetries defined on them Chapter 2 deals with integrable and linearizable systems in two dimensions The authors start from the prototype of integrable and linearizable partial differential equations the Korteweg de Vries and the Burgers equations Then they consider the best known integrable differential difference and partial difference equations Chapter 3 considers generalized symmetries and conserved densities as integrability criteria The appendices provide details which may help the readers understanding of the subjects presented in Chapters 2 and 3 This book is written for PhD students and early researchers both in theoretical physics and in applied mathematics who are interested in the study of symmetries and integrability of difference equations

Quantified Representation of Uncertainty and Imprecision Dov M. Gabbay, Philippe Smets, 1998-10-31 We are happy to present the first volume of the Handbook of Defeasible Reasoning and Uncertainty Management Systems Uncertainty pervades the real world and must therefore be addressed by every system that attempts to represent reality The representation of uncertainty is a major concern of philosophers logicians artificial intelligence researchers and computer scientists psychologists statisticians economists and engineers The present Handbook volumes provide frontline coverage of this area This Handbook was produced in the style of previous handbook series like the Handbook of Philosophical Logic the Handbook of Logic in Computer Science the Handbook of Logic in Artificial Intelligence

and Logic Programming and can be seen as a companion to them in covering the wide applications of logic and reasoning We hope it will answer the needs for adequate representations of uncertainty This Handbook series grew out of the ESPRIT Basic Research Project DRUMS II where the acronym is made out of the Handbook series title This project was financially supported by the European Union and regroups 20 major European research teams working in the general domain of uncertainty As a fringe benefit of the DRUMS project the research community was able to create this Hand book series relying on the DRUMS participants as the core of the authors for the Handbook together with external international experts

Quantum Measure Theory Jan Hamhalter, 2003-10-31 This book is the first systematic treatment of measures on projection lattices of von Neumann algebras It presents significant recent results in this field One part is inspired by the Generalized Gleason Theorem on extending measures on the projection lattices of von Neumann algebras to linear functionals Applications of this principle to various problems in quantum physics are considered hidden variable problem Wigner type theorems decoherence functional etc Another part of the monograph deals with a fascinating interplay of algebraic properties of the projection lattice with the continuity of measures the analysis of Jauch Piron states independence conditions in quantum field theory etc These results have no direct analogy in the standard measure and probability theory On the theoretical physics side they are instrumental in recovering technical assumptions of the axiomatics of quantum theories only by considering algebraic properties of finitely additive measures states on quantum propositions

Non-Perturbative Field Theory Yitzhak Frishman, Jacob Sonnenschein, 2023-07-27 Pedagogical exposition providing a new perspective on relativistic quantum field theory for graduate students and researchers *Algebras, Lattices, Varieties* Ralph N. McKenzie, George F. McNulty, Walter F. Taylor, 2018-07-09 This book presents the foundations of a general theory of algebras Often called universal algebra this theory provides a common framework for all algebraic systems including groups rings modules fields and lattices Each chapter is replete with useful illustrations and exercises that solidify the reader's understanding The book begins by developing the main concepts and working tools of algebras and lattices and continues with examples of classical algebraic systems like groups semigroups monoids and categories The essence of the book lies in Chapter 4 which provides not only basic concepts and results of general algebra but also the perspectives and intuitions shared by practitioners of the field The book finishes with a study of possible uniqueness of factorizations of an algebra into a direct product of directly indecomposable algebras There is enough material in this text for a two semester course sequence but a one semester course could also focus primarily on Chapter 4 with additional topics selected from throughout the text

Algebras of Unbounded Operators Aleksey Ber, Vladimir Chilin, Galina Levitina, Fedor Sukochev, Dmitriy Zanin, 2025-03-03 Derivations on von Neumann algebras are well understood and are always inner meaning that they act as commutators with a fixed element from the algebra itself The purpose of this book is to provide a complete description of derivations on algebras of operators affiliated with a von Neumann algebra The book is designed to serve as an introductory graduate level to various measurable operators affiliated with a von Neumann algebras and their properties These classes of operators form their respective algebras and the problem of describing derivations on these algebras was raised by Ayupov and later by Kadison and Liu A principal aim of the book is to fully resolve the Ayupov Kadison Liu problem by proving a necessary and sufficient condition of the existence of non inner derivation of algebras of measurable operators It turns out that only for a finite type I von Neumann algebra M may there exist a non inner derivation on the algebra of operators affiliated with M In particular it is established that the classical derivation d/dt of functions of real variables can be extended up to a derivation on the algebra of all measurable functions This resolves a long standing problem in classical analysis

Theory: Volume 1, Introduction Michael B. Green, John H. Schwarz, Edward Witten, 2012-07-26 Twenty five years ago Michael Green John Schwarz and Edward Witten wrote two volumes on string theory Published during a period of rapid progress in this subject these volumes were highly influential for a generation of students and researchers Despite the immense progress that has been made in the field since then the systematic exposition of the foundations of superstring theory presented in these volumes is just as relevant today as when first published A self contained introduction to superstrings Volume 1 begins with an elementary treatment of the bosonic string before describing the incorporation of additional degrees of freedom fermionic degrees of freedom leading to supersymmetry and internal quantum numbers

leading to gauge interactions A detailed discussion of the evaluation of tree approximation scattering amplitudes is also given Featuring a new preface setting the work in context in light of recent advances this book is invaluable for graduate students and researchers in general relativity and elementary particle theory
