Patents and Cartographic Inventions Mark Monmonier, 2017-03-28 This book explores the US patent system which helped practical minded innovators establish intellectual property rights and fulfill the need for achievement that motivates inventors and scholars alike In this sense the patent system was a parallel literature a vetting institution similar to the conventional academic scientific technical journal insofar as the patent examiner was both editor and peer reviewer while the patent attorney was a co author or ghost writer In probing evolving notions of novelty non obviousness and cumulative innovation Mark Monmonier examines rural address guides folding schemes world map projections diverse improvements of the terrestrial globe mechanical route following machines that anticipated the GPS navigator and the early electrical you are here map which opened the way for digital cartography and provided fodder for patent trolls who treat the patent largely as a license to litigate

Bihar and Mithila J. Albert Rorabacher, 2016-09-13 The struggling states of Bihar and Mithila serve as extreme examples of India's problems Development here has been thwarted by a hereditary landed aristocracy supported by religion casteism custom social stratification tradition and patterns of behaviour that can be traced back millennia In turn all these have been masterfully manipulated by co-opted politicians who have turned politics into a veritable art form as this volume comprehensively demonstrates Please note Taylor Francis does not sell or distribute the Hardback in India Pakistan Afghanistan Nepal Bhutan Bangladesh and Sri Lanka

All-Optical Signal Processing Stefan Wabnitz, Benjamin J. Eggleton, 2015-04-11 This book provides a comprehensive review of the state of the art of optical signal processing technologies and devices It presents breakthrough solutions for enabling a pervasive use of optics in data communication and signal storage applications It presents optical signal processing as a solution to overcome the capacity crunch in communication networks The book content ranges from the development of innovative materials and devices such as graphene and slow light structures to the use of nonlinear optics for secure quantum information processing and overcoming the classical Shannon limit on channel capacity and microwave signal processing Although it holds the promise for a

substantial speed improvement today's communication infrastructure optics remains largely confined to the signal transport layer as it lags behind electronics as far as signal processing is concerned This situation will change in the near future as the tremendous growth of data traffic requires energy efficient and fully transparent all optical networks The book is written by leaders in the field
