and effectiveness of cBHT preparations It also assesses whether the available evidence suggests that these preparations have clinical utility and safety profiles warranting their clinical use and identifies patient populations that might benefit from cBHT preparations in lieu of FDA approved BHT      *Solitaire* Eluned Price,1973 Annual scientific publication from Durrell Wildlife Conservation Trust      *Neuroscience in Science Fiction Films* Sharon Packer, M.D.,2014-11-19 As the gap between science fiction and science fact has narrowed films that were intended as pure fantasy at the time of their premier have taken on deeper meaning This volume explores neuroscience in science fiction films focusing on neuroscience and psychiatry as running themes in SF and finding correlations between turning points in neuroscience fiction and advances in the scientific field The films covered include *The Strange Case of Dr Jekyll and Mr Hyde* *The Island of Dr Moreau* *Robocop* *The Stepford Wives* *The Mind Snatchers* and iconic franchises like *Terminator* *Ironman* and *Planet of the Apes* Examining the parallel histories of psychiatry neuroscience and cinema this book shows how science fiction films offer insightful commentary on the scientific and philosophical developments of their times      *October 2019 Monthly Current Affairs with MCQs for Competitive Exams* Disha Experts,2019-09-25      *September 2019 Monthly Current Affairs with MCQs for Competitive Exams* Disha Experts,2019-09-01      *The world according to zebrafish: How neural circuits generate behaviour* Gonzalo G. De Polavieja,German Sumbre,2014-11-07 Understanding how the brain functions is one of the most ambitious current scientific goals This challenge will only be accomplish by a multidisciplinary approach involving genetics molecular biology optics ethology neurobiology and mathematics and using tractable model systems The zebrafish larva is a transparent genetically tractable small vertebrate ideal for the combination state of the art imaging techniques e g two photon scanning microscopy single plane illumination microscopy spatial light modulator microscopy and lightfield microscopy bioluminescence and optogenetics to monitor and manipulate neuronal activity from single specific neurons up to the entire brain in an intact behaving organism Furthermore the zebrafish model offers large and increasing collection of mutant and transgenic lines modelling human brain diseases With these advantages in hand the zebrafish larva became in the recent years a novel animal model to study neuronal circuits and behaviour taking us closer than ever before to understand how the brain controls behaviour      *Investigating and harnessing T-cell functions with engineered immune receptors and their ligands* Bruno Laugel,2015-01-22 T cells are an essential component of the immune system that provide protection against pathogen infections and cancer and are involved in the aetiology of numerous autoimmune and autoinflammatory pathologies Their importance in disease the relative ease to isolate expand and manipulate them ex vivo have put T cells at the forefront of basic and translational research in immunology Decades of study have shed some light on the unique way T cells integrate extrinsic environmental cues influencing an activation program triggered by interactions between peptide MHC complexes and the antigen recognition machinery constituted of clonally distributed T cell receptors and their co receptor CD4 or CD8 The manipulation of these molecular determinants in cellular systems or as recombinant proteins has considerably enhanced

our ability to understand antigen specific T cell activation to monitor ongoing T cell responses and to exploit T cells for therapy Even though these principles have given numerous insights in the biology of CD8 T cells that translate into promising therapeutic prospects as illustrated by recent breakthroughs in cancer therapy they have proven more challenging to apply to CD4 T cells This Research Topic aims to provide a comprehensive view of the recent insights provided by the use of engineered antigen receptors and their ligands on T cell activation and how they have been or could be harnessed to design efficient immunotherapies

**Barriers to Bioweapons** Sonia Ben Ouagrham-Gormley,2014-12-15 In both the popular imagination and among lawmakers and national security experts there exists the belief that with sufficient motivation and material resources states or terrorist groups can produce bioweapons easily cheaply and successfully In Barriers to Bioweapons Sonia Ben Ouagrham Gormley challenges this perception by showing that bioweapons development is a difficult protracted and expensive endeavor rarely achieving the expected results whatever the magnitude of investment Her findings are based on extensive interviews she conducted with former U S and Soviet era bioweapons scientists and on careful analysis of archival data and other historical documents related to various state and terrorist bioweapons programs Bioweapons development relies on living organisms that are sensitive to their environment and handling conditions and therefore behave unpredictably These features place a greater premium on specialized knowledge Ben Ouagrham Gormley posits that lack of access to such intellectual capital constitutes the greatest barrier to the making of bioweapons She integrates theories drawn from economics the sociology of science organization and management with her empirical research The resulting theoretical framework rests on the idea that the pace and success of a bioweapons development program can be measured by its ability to ensure the creation and transfer of scientific and technical knowledge The specific organizational managerial social political and economic conditions necessary for success are difficult to achieve particularly in covert programs where the need to prevent detection imposes managerial and organizational conditions that conflict with knowledge production

**Eating Ourselves Sick** Louise Stephen,2017-01-31 Louise Stephen s powerful no holds barred demolition of Big Food dissects the profit motive that has filled our food supply with toxic oils and sugar and shows us how money is destroying our health DAVID GILLESPIE Our diet has changed radically in the space of 100 years We have swapped home cooked food made with whole ingredients for processed food made from sugar seed oils and refined wheat Modern day food is cheap convenient and accessible but also hugely destructive to our health Former business consultant Louise Stephen developed an autoimmune disease in her early thirties which led to renal failure and a kidney transplant As a middle class professional from a wealthy Western country she was perplexed as to how she had become so ill She started to investigate using her business and research skills to find out what she could about diet and how it relates to health What she uncovered will change the way you think about processed food frozen dinners breakfast cereals packaged snacks dips flavoured drinks bottled sauces and the industry that is profiting from the commodification and toxication of our food supply Stephen shows us

how Big Food is picking up where Big Tobacco left off employing skilful marketing to nudge us towards increasingly processed food while hoping we'll fail to notice the commensurate rise in obesity and decline in health Stephen reveals how governments and peak health bodies are often powerless to intervene and even worse are sometimes complicit in convincing us to ditch our wholefood ingredients for factory made products This is not a diet book Meticulously researched and compellingly argued *Eating Ourselves Sick* shines a light on the powerful forces that stand between us and a healthy diet

**Environmental Radiobiology** Paul N. Schofield, Carmel E. Mothersill, 2023-10-17 This book focuses on the impacts of anthropogenic radiation on wildlife and ecosystems and provides an in depth look at the approaches and available tools we can use to gain information about biological effects of radiation in the environment The nuclear accidents in Chernobyl in 1986 and Fukushima in 2011 focussed the attention of the world on the vulnerability of ecosystems to radiation In Chernobyl there still remains an exclusion zone where levels are considered to be too high for people and impacts on terrestrial and aquatic ecosystems can still be measured 35 years later In the area impacted by the Fukushima disaster intense remediation is still under way at tremendous cost and causing widespread disruption to the environment That accident impacted the terrestrial and marine ecosystems In both accidents it became obvious that a radiation protection framework focussing on protection of humans a single species and using evacuation as a key strategy was not sufficient to protect the natural environment The complexity of ecosystems makes developing a protection framework very challenging but in order to even start the process it is vital to gather information about likely impacts of low dose exposures on wildlife and to develop monitoring tools to measure changes over time This book contains reviews and original research aimed at filling our knowledge gaps about these important areas Environmental Radiobiology will be a key resource for academics researchers and advanced students of Radiobiology Radioecology Biology Ecology Biomedicine and Research Methods The chapters included in this book were originally published as a special issue of International Journal of Radiation Biology *Blue Mind* Wallace J. Nichols, 2014-07-22 A landmark book by marine biologist Wallace J Nichols on the remarkable effects of water on our health and well being Why are we drawn to the ocean each summer Why does being near water set our minds and bodies at ease In *Blue Mind* Wallace J Nichols revolutionizes how we think about these questions revealing the remarkable truth about the benefits of being in on under or simply near water Combining cutting edge neuroscience with compelling personal stories from top athletes leading scientists military veterans and gifted artists he shows how proximity to water can improve performance increase calm diminish anxiety and increase professional success *Blue Mind* not only illustrates the crucial importance of our connection to water it provides a paradigm shifting blueprint for a better life on this Blue Marble we call home [Find Your Peace](#) Rodica Malos, 2020 Your best prescription goes beyond science This book will help transform your way of thinking and give you tools to change your life and even your eternity It will help you cope with stress and others and change the world around you Despite health care professionals constant efforts to educate entice advise convince

indoctrinate and persuade patients with smooth talk bribes guilt and manipulation to make people understand and follow medical advice the results are often minimal People continue to suffer from various diseases and chronic conditions Many still die prematurely from high levels of stress caused by fear worry anxiety and depression Even with so much knowledge the gaps in the way people manage stressors in their daily lives needs to be addressed In Find Your Peace Dr Rodica Malos tackles this universal topic head on Brimming with medical research basic brain chemistry and scriptural wisdom this powerful encouraging book reveals how the divine design of the human body functions most perfectly when a person's thought life aligns with God's instructions prescriptions beyond science God's divine prescriptions and timeless truths will transform comfort sustain and heal Readers will learn to confront their fear anxiety and depression with supernatural resources and develop a healthier lifestyle full of blessings and peace
