*Formulations* Andrew Witt, 2022-01-11 An investigation of mathematics as it was drawn encoded imagined and interpreted by architects on the eve of digitization in the mid twentieth century In *Formulations* Andrew Witt examines the visual methodological and cultural intersections between architecture and mathematics The linkages Witt explores involve not the mystic transcendence of numbers invoked throughout architectural history but rather architecture s encounters with a range of calculational systems techniques that architects inventively retooled for design Witt offers a catalog of mid twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques

Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals      Mastering Communication in Contemporary America Melvin Lawrence DeFleur, Patricia Kearney, Timothy G. Plax, 1993 This text discusses the nature and application of the principles of human communication It addresses both interpersonal and mass communication and explores critical similarities and differences between animal and human communication The first eight chapters provide students with a strong foundation of the concepts and research supported theories The second half of the book uses this foundation to focus on practical applications including influencing others coping with conflicts and speaking before a group      **Cold-Case Christianity**
