Lesson 19 Evidence For Evolution:

Lines of Evidence: How Recent Science Infers the Existence of God Rick Jory, 2023-08-18 Secular science demands we accept the philosophical dogma of scientific materialism that only material entities exist Yet recent science has discovered the immaterial Also mandated is the assumption that all things must be explained by natural causes But we now are certain that the universe had a beginning There was a time when nature didn't exist and yet we must attribute the origin of the universe to nature And what about Darwin's theory of evolution taken as fact that every plant and animal owe its origin to a common ancestor and naturalistic causes At the time of Darwin over a century and a half ago no one knew the true complexity of the cell We now know the simplest of living organisms has 159 662 base pairs of DNA and 182 protein coding genes What naturalistic cause put all of this together Could this be assembled by blind purposeless accident What does recent science have to say And what about recent discoveries in origin of life research Do we now know enough to suggest life could not have created itself A lot is happening in today's science that is best explained through the Christian worldview Let's see what some of today's scientists are now saying

Cosmosapiens John Hands, 2017-10-31 A critical overview of scientific orthodoxy in an attempt to answer the fundamental questions what are we and why are we here Kirkus Reviews Specialist scientific fields are developing at incredibly swift speeds but what can they really tell us about how the universe began and how we as humans evolved to play such a dominant role on Earth John Hands's extraordinarily ambitious book merges scientific knowledge from multiple disciplines and evaluates without bias or preconception all the theories and evidence about the origin and evolution of matter consciousness and mankind The result a pearl of dialectical reasoning Publishers Weekly starred review provides the most comprehensive account yet of current ideas such as cosmic inflation dark energy the selfish gene and neurogenetic determinism In the clearest possible prose it differentiates the firmly established from the speculative and examines the claims of various fields to approach a unified theory of everything In doing so it challenges the orthodox consensus in those branches of cosmology biology and neuroscience that have ossified into dogma Its shocking and invigorating analysis Daily Telegraph A Best Science Book of 2015 reveals underlying patterns of cooperation complexification and convergence that lead to the unique emergence in humans of a self reflective consciousness that enables us to determine our future evolution This groundbreaking book is destined to become a classic of scientific thinking Praise for Cosmosapiens This is a truly exceptional piece of work Tim Crane Knightsbridge Professor of Philosophy The University of Cambridge A game changer In the tradition of Thomas Kuhn's The Structure of Scientific Revolutions this lucidly written penetrating analysis challenges us to rethink many things we take for granted about ourselves our society and our universe It will become a classic Peter Dreier E P Clapp Distinguished Professor of Politics Occidental College Hands is an astute observer of recent trends in scientific ideas bold enough to point out what he sees as sense and nonsense and intelligently explain why Even in cases where one might disagree the arguments are thought provoking Paul Steinhardt

The Evolution Delusion Bart Rask, 2021-09-01 Does the field of evolution differ from other sciences The author a reviewer for a major medical journal scrutinized hundreds of scientific references in evolutionary literature adopting the same standards used for studies submitted for medical publication The data show that there are two types of evolution microevolution and macroevolution with a clear boundary between them based upon the presence and absence of empirical evidence respectively The surprising results show that there is a universal disconnect between the data and the conclusions that claim to show the larger changes of macroevolution The author reveals patterns of deviations from standard scientific methods in these studies For the first time evolutionary data have been summarized to describe both what evolution can and cannot accomplish The author shows the reader how to recognize the

different ways in which the evidence for microevolution within and between some species differs from the unsupported macroevolution of most species Previous critiques of macroevolution have been debunked by advocates who have cited a multitude of scientific studies This book goes beyond previous critiques by directly addressing the data from these studies to see if they do in fact support macroevolution focused conclusions Many expert counterarguments against this book's thesis are presented and examined in the context of scientific research to reassure the reader that the author has left no stone unturned in the macroevolution debate A theory is proposed as to why there may be no empirical evidence for macroevolution The book concludes with a section entitled What we see differently There the author shows the reader the differences in perspective between the evolutionist and macroevolution critic as they look at and interpret the very same set of data
