International Handbook of Mathematical Learning Difficulties Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30 This comprehensive volume provides teachers, researchers, and education professionals with cutting edge knowledge developed in the last decades by the educational, behavioural, and neurosciences, integrating cognitive, developmental, and socioeconomic approaches to deal with the problems children face in learning mathematics. The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades, but the most part of this research has been conducted in non-applied settings and there is still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings. Now it is time to bring the results from the laboratory to the classroom. Apart from bringing the theoretical discussions to educational settings, the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments. It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues. And it does so from an international perspective, dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world. All of this makes the *International Handbook of Mathematical Learning Difficulties* an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society.

Sarcopenia Dominique Meynial-Denis, 2019-11-20 *Sarcopenia: Molecular, Cellular, and Nutritional Aspects* describes the progressive loss of skeletal muscle mass and strength defined by Rosenberg in 1997 as a hallmark of aging and referred to as sarcopenia. As life expectancy continues to increase worldwide, sarcopenia has become a major public health issue. The condition worsens in the presence of chronic diseases, accelerating its progression. Sarcopenia is not considered to be a process of normative aging but according to the International Classification of Disease Tenth Revision Clinical Modification (ICD-10-CM) as a disease. As sarcopenia is an ineluctable process, prevention and management are the only options to promote healthy aging; these actions should perhaps be taken during youth. Included in this book are features, essential information on sarcopenia, its current definition, and molecular and cellular aspects of this disease. Discusses the development of physical frailty, a complication of sarcopenia, and predicts its occurrence in the older population. Presents alterations in muscle protein turnover and mitochondrial dysfunction in the aging process. Provides data on the negative involvement of sarcopenia in certain chronic diseases. Describes presbyphagia or age-related changes in the swallowing mechanism in older people. Details possible strategies to combat muscle wasting in healthy older adults and their limits. This book features information collected from pioneers or experts on human aging from around the globe, including Europe, Brazil, Canada, Japan, and the United States. It is a valuable source of information for nutritional scientists, medical doctors, sports scientists, food scientists, dietitians, students in these fields, and for anyone interested in nutrition. We hope this

book provides a better understanding of sarcopenia which inevitably occurs with aging without weight loss Moreover this book will supply information outlining strategies to prevent or limit muscle wasting due to normal aging in order to promote successful aging
