Kahaner,1984   **Handbook of Computational Finance** Jin-Chuan Duan,Wolfgang Karl Härdle,James E. Gentle,2011-10-25 Any financial asset that is openly traded has a market price Except for extreme market conditions market price may be more or less than a fair value Fair value is likely to be some complicated function of the current intrinsic value of tangible or intangible assets underlying the claim and our assessment of the characteristics of the underlying assets with respect to the expected rate of growth future dividends volatility and other relevant market factors Some of these factors that affect the price can be measured at the time of a transaction with reasonably high accuracy Most factors however relate to expectations about the future and to subjective issues such as current management corporate policies and market environment that could affect the future financial performance of the underlying assets Models are thus needed to describe the stochastic factors and environment and their implementations inevitably require computational finance tools   MATLAB Manual, Ordinary Differential Equations John C. Melissinos,Jim Napolitano,2003-03-17 A revision of the leading text on experimental physics The feature of this book that has made it one of

the most loved texts on the subject is that it goes far beyond a mere description of key experiments in physics The author successfully provides the reader with an understanding and appreciation of the physics behind the experiments The second edition will be an extensive revision introducing many new devices including the use of computers and software programs that have come into use since the publication of the first edition In addition the important areas of condensed matter physics and optical physics will be added including two entirely new chapters on lasers and optics Modern analysis and acquisition techniques Integration with matlab for data analysis and display New experiments include fundamentals of lasers *An Introduction to High-performance Scientific Computing* ,1996 Designed for undergraduates An Introduction to High Performance Scientific Computing assumes a basic knowledge of numerical computation and proficiency in Fortran or C programming and can be used in any science computer science applied mathematics or engineering department or by practicing scientists and engineers especially those associated with one of the national laboratories or supercomputer centers This text evolved from a new curriculum in scientific computing that was developed to teach undergraduate science and engineering majors how to use high performance computing systems supercomputers in scientific and engineering applications Designed for undergraduates An Introduction to High Performance Scientific Computing assumes a basic knowledge of numerical computation and proficiency in Fortran or C programming and can be used in any science computer science applied mathematics or engineering department or by practicing scientists and engineers especially those associated with one of the national laboratories or supercomputer centers The authors begin with a survey of scientific computing and then provide a review of background numerical analysis IEEE arithmetic Unix Fortran and tools elements of MATLAB IDL AVS Next full coverage is given to scientific visualization and to the architectures scientific workstations and vector and parallel supercomputers and performance evaluation needed to solve large scale problems The concluding section on applications includes three problems molecular dynamics advection and computerized tomography that illustrate the challenge of solving problems on a variety of computer architectures as well as the suitability of a particular architecture to solving a particular problem Finally since this can only be a hands on course with extensive programming and experimentation with a variety of architectures and programming paradigms the authors have provided a laboratory manual and supporting software via anonymous ftp Scientific and Engineering Computation series A Guide to MATLAB Brian R. Hunt,Ronald L. Lipsman,Jonathan M. Rosenberg,2014-08-21 MATLAB is a high level language and interactive environment for numerical computation visualization and programming Using MATLAB you can analyze data develop algorithms and create models and applications The language tools and built in math functions enable you to explore multiple approaches and reach a solution faster than with spreadsheets or traditional programming languages *Identification of Power Plant Processes - Theory and Application* Roland Kulessky,Gregory Nudelman,2015-08-31 The book presents non standard approaches and algorithms for design tuning and modeling of power plant control systems in the environment of Matlab and

its Toolboxes The topic at hand is the identification of transfer functions of Single Input Single Output SISO controlled processes which may be described as dynamical links with self regulating or integrating or differentiating properties Within a framework of a single procedure the nominal transfer function of the power process and the transfer functions uncertainties are identified creating a basis for a robust approach This textbook provides the necessary tools guidance and support for understanding and effective use of the modern methods of identification in the design tuning and optimization of power plant control systems It can also serve as a theoretical background for creating software for these purposes
