Biomechatronics: Harmonizing Mechatronic Systems with Human Beings Dingguo Zhang, Venketesh Dubey, Wenwei Yu, Kin Huat Low, 2019-02-05 This eBook provides a comprehensive treatise on modern biomechatronic systems centred around human applications A particular emphasis is given to exoskeleton designs for assistance and training with advanced interfaces in human machine interaction Some of these designs are validated with experimental results which the reader will find very informative as building blocks for designing such systems This eBook will be ideally suited to those researching in biomechatronic area with bio feedback applications or those who are involved in high end research on man machine interfaces This may also serve as a textbook for biomechatronic design at post graduate level *Neutrosophic Sets and Systems, vol. 5/2014* A. A. Salama, O. M. Khaled, K. M. Mahfouz, S. Broumi, F. Smarandache, K. Mondal, S. Praminik, M. Eisa, M. Ali, Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc Towards an embodied science of intersubjectivity: Widening the scope of social understanding research Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of disconnection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and

cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory

Progress Toward Transforming the Integrated Risk Information System (IRIS) Program National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review Advances Made to the IRIS Process, 2018-04-11 Over the past several years the US Environmental Protection Agency EPA has been transforming the procedures of its Integrated Risk Information System IRIS a program that produces hazard and dose response assessments of environmental chemicals and derives toxicity values that can be used to estimate risks posed by exposures to them The transformation was initiated after suggestions for program reforms were provided in a 2011 report from the National Academies of Sciences Engineering and Medicine that reviewed a draft IRIS assessment of formaldehyde In 2014 the National Academies released a report that reviewed the IRIS program and evaluated the changes implemented in it since the 2011 report Since 2014 new leadership of EPA's National Center for Environmental Assessment NCEA and IRIS program has instituted even more substantive changes in the IRIS program in response to the recommendations in the 2014 report
