MATERIALS SCIENCE AND ENGINEERING -Volume III Rees D. Rawlings,2009-12-05 Materials Science and Engineering theme is a component of Encyclopedia of Physical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Materials Science and Engineering is concerned with the development and selection of the best possible material for a particular engineering task and the determination of the most effective method of producing the materials and the component The Theme with contributions from distinguished experts in the field discusses Materials Science and Engineering In this theme the history of materials is traced and the concept of structure atomic structure microstructure and defect structure and its relationship to properties developed The theme is structured in five main topics Materials Science and Engineering Optimization of Materials Properties Structural and Functional Materials Materials Processing and Manufacturing Technologies Detection of Defects and Assessment of Serviceability Materials of the Future which are then expanded into multiple subtopics each as a chapter These three volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

British Journal of Non-destructive Testing ,1993 **Non-Destructive Testing** J. Boogaard,G.M. van Dijk,2012-12-02 Non Destructive Testing NDT is an activity closely related to the quality and reliability of products and to the reliable and safe operation of industrial plants Physical measuring techniques are used to examine parts of constructional assemblies for hidden imperfections and defects A wide choice of measuring techniques is available to meet the demand of examining a wide variety of materials such as metals plastics rocks as well as different structures and sizes ranging from semiconductor chips to nuclear reactors and off shore oil platforms Activities in the field of NDT encompass Fundamental research to understand and describe the way in which reactions of certain imperfections to a physical measuring technique can be optimized and used to assess type and grade of imperfection Methods to characterize materials and materials properties Applications in product quality control Applications in plant inspection to ensure a reliable operation of components avoiding damage to both man and environment as well as financial losses Personnel education and qualification schemes The spread of NDT applications to newly industrialized countries The two proceedings volumes contain over 400 review and specialist papers The most recent developments in the field of NDT are presented with contributions by outstanding experts from all over the world Papers are grouped according to technique for those dealing with fundamental research and to field of application for the more practical oriented ones In this way each chapter provides an easy overview of related current research Extensive keyword indexes have been included to facilitate the retrieval of information according to individual requirements The high technical level of the papers and their up to date content will make them an indispensable source of information for students researchers and professionals in the areas covered

Stepanova, Mikhail B. Rigmant, 2018-12-07 Superalloys form a class of the structural materials for high temperature
applications Nickel superalloys are extensively used in the high temperature components of gas turbines due to their
excellent creep fatigue and corrosion resistance at elevated temperatures These materials are considered paramagnetic in
the range of working temperatures This book presents the features of the ternary phase diagrams Ni Al X X Co Fe Nb Ti Cr
effects of the alloying on the long range order and mechanical properties of the Ni₃Al based alloys Description of the strain
induced ferromagnetism in the Ni₃Al based alloys and magnetic control of the failure of gas turbine blades are also included
A separate section is devoted to the analysis of the vibration process and strength change in the single crystal gas turbine
blades This book includes the review of the new intermetallic cobalt superalloys The structure crystal lattice parameters
orientation relationships between phases mechanical and magnetic properties of the Co₃Al W based alloys are described
Non destructive magnetic point control of the martensite content in low magnetic austenitic alloys is a new method for
detection of the local sites with internal stresses This method is useful for the detection of the residual stress in the critical
parts of industrial products This book may be useful for specialists in material science first year postgraduate students taking
a class in material science and engineering and engineers developing new alloys for the gas turbine technology
