and knowledge from emerging nations who are increasingly contributing to research that is critical for development and advancement. The role of built environment practitioners will continue to evolve by building on the sound foundations laid down by the professions and by exploiting to the full the new technologies available to us through conducting innovative research but more guidance on the research process is necessary to ensure the integrity and quality of the output. This book has been structured so that each chapter is largely free standing allowing the reader undergraduate postgraduate or practitioner to reference the material with ease. It aims to provide practical guidance on conducting research and on writing a dissertation or report and begins by considering the general research background in a built environment context. It then covers research ethics before moving on to discuss the importance of selecting the right research topic and title and writing a clear abstract. The chapters then cover introducing a research project and the authors include a section on the problem statement, research questions, aims and objectives, research gaps and motivations for the study. The book goes on to cover the literature review, section theoretical and conceptual frameworks, the various types of methodological approaches and when to apply them. The findings section, discussion of the results and the study's implications are then discussed before the final chapters cover the conclusion and recommendations. The book provides a useful reference for higher education students, graduates, postgraduates and practitioners engaged in all aspects of construction and built environment research.
