

ENDOCRINE SYSTEM

Endocrine System: WORKING TOGETHER

Each organ system works on other systems within the body to do its "job". See below to learn just some of the ways that the endocrine system interacts with other organ systems.

Nervous System

Circulatory System

Endocrine System: FACTS

Endocrine System: PROBLEMS

Most of the time, the endocrine system works perfectly well. However, sometimes problems can arise.

Diabetes

Diabetes is a condition that causes high blood glucose (sugar) levels. It is caused by the body being unable to either produce or use the hormone insulin. So, the glucose (sugar) gets stuck in the blood. Symptoms include increased thirst, weight loss, frequent urination, blurred vision, slow wound healing, and frequent weight changes, persistent acne, rashes, or itching in the hands.

Endocrine System: KEY TERMS

Term	Definition
Endocrine System	Network of endocrine glands that make, store, and release hormones.
Hormones	Chemical messengers that carry information and instructions from one cell to another.

Endocrine System: HORMONES

Hormones are chemical signals. Hormones are released by a gland into the bloodstream. They travel through the bloodstream and bind to that specific target cell. The target cell then reacts to the hormone and releases a signal. This signal then travels through the bloodstream to the target cell.

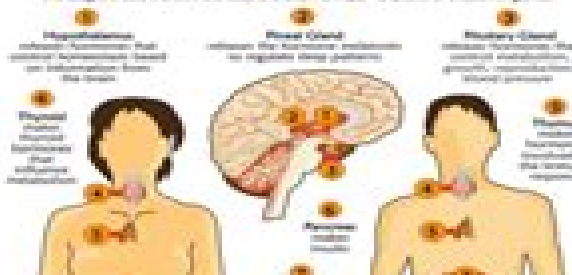

Endocrine System: FIGHT-OR-FLIGHT

The fight-or-flight response is a reaction that occurs in the body when we are really frightened. The hormone **adrenaline** (also known as **epinephrine**) is released by the adrenal glands. Adrenaline causes the heart to beat faster, the lungs to take in more oxygen, and the muscles to be ready for action. This is the body's way of preparing itself to either fight or flee when it is in danger. In other words, the body's response to stress prepares us to react to the danger.

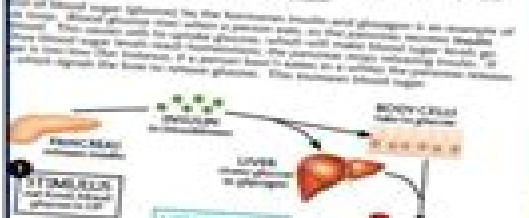

Endocrine System: GLANDS

A **gland** is a structure that produces and releases substances that perform a specific function in the body. There are two types of glands: **endocrine glands** and **exocrine glands**. Endocrine glands release their products (hormones) directly into the bloodstream. Exocrine glands release their products (like sweat or saliva) through a duct to the outside of the body.

Endocrine System: FEEDBACK LOOPS

Endocrine activities are regulated by complex feedback loops. These feedback loops help the body maintain a balance. When a hormone level is too high or too low, the body sends a signal to the glands to either produce more or less of that hormone. This signal is called a **feedback loop**. The feedback loop helps the body maintain a balance.
