The Trisectors Underwood Dudley, 2019-07-01 Underwood Dudley is well known for his collection of books on mathematical cranks Here he offers yet another angle trisectors It is impossible to trisect angles with straightedge and compass alone but many people try and think they have succeeded This book is about angle trisections and the people who attempt them According to Dudley Hardly any mathematical training is necessary to read this book There is a little trigonometry here and there but it may be safely skipped There are hardly any equations There are no exercises and there will be no final examination The worst victim o

One-third Angle in Trigonometry Bhava Nath Dahal, 2016-10-15 Breaking Classical Rules in Trigonometry Mission 2050 New method to find trigonometric values for one third angle of a known angle It suggest a simple method to solve the cubic equation involved in the one third angles The method does not use an imaginary number root nor use a complex depression method Learning new method may be for one hour study New theorem has introduced to trigonometric values of one third angle through Crd 120 of Sin 60 route Same concept has promoted for one fifth angle as 72 and 36 route for 5 roots of one fifth angle Use of 120 A 72 A 36 A 30 A 25 7 A 24 A or 75 A etc opens new area for the trigonometry This book suggest the method for other higher degree equation for solving trigonometric identities The book solves the complexities faced since 2000 years

Algebra, Parabola, and Trigonometric Equations Which Can Be Used on Sides of Right Triangles Colin Gardner, 2006-06-01 Provides new parameters for the quadratic equation such that two dozen or more trigonometric equations using these same parameters provide identical results Twenty two of these trigonometric equations have six different looking coefficients which make them all equal to one quadratic equation Each equation using these same

parameters has three sets of new parameters which make them so they can be on sides of right triangles with six sets that will do this is included Each quadratic equation having an integer solution has also a Pythagorean equation which has identical answers Equations to this is provided One set of data is provided that makes this all possible with the three answers one for each side being provided Non integer solutions are also possible Each set of equations or integers on the sides of right triangles can be put into a parabolic form that is what you see on the two legs of a right triangle can be added together to obtain the correct equation or integer on its hypotenuse These three new quadratic dependent coefficients can be produced by four independent variables with criteria on how to use them is provided Conversion equation between the three and four types of new parameters is provided Equations to make many new parabolic equations is provided with one example being provided A table of over a dozen different algebra equations which have two or three different trigonometric equations which have equal answers is shown with angle criteria to ensure that this is true Six conventional sets of normal trigonometric equations which can easily be put on sides on right triangles is provided along with four sets containing sines and cosines on each triangle side but with different coefficients Two examples showing how to convert normal quadratic equation coefficients to the three new coefficients is provided along with answers A third quadratic equation is given only with answers Algebraic equation conversions to each quadratic equation is provided Next parameters which define five different data variations for each algebra and trigonometric is provided with one same answer for each making 15 different solutions Five different trigonometric equations using these same new quadratic coefficients are provided with all having the same identical answers as shown Next one set of trigonometric equations is shown on the sides of two different right triangles each with different coefficients What follows is a table of equation coefficients which can be expanded both in the horizontal as well as in the vertical direction to be as large as one desires based upon any two desired selected sets of data Equations to do this are provided A special computer program which is required to compute these and any future coefficients is provided This program has the capability to produce 3X3 tables of Pythagorean triples which meets a $a^2 + b^2 = c^2$ criteria in both the horizontal as well as in the vertical direction A table of these is provided A set of equations is provided to convert 2nd order algebraic equations which are on the sides of a right triangle to parabolic quadratic and one having sines and cosines on each triangle side is provided One example of using sines and cosines on a right triangle side to convert ANY other set of equations or integers to become a new set of similar equations or integers is also provided with one example
