- a) Select a method (e.g. linear regression) of the regression and study whether it is linear or logarithmic. Subsequently, investigate if it supports the self-similarity property in the generated, resulting in a dimensionality reduction.
- b) Investigate how the generated graphs and the structures performed in a single layer self-supervised evaluation. What structural features obtained the low loss for the first three iterations and how did it change after the training steps?
- c) Compare the generated results of the self-supervised training with the supervised graph autoencoder. Investigate whether the supervised training helps to achieve a better performance than the self-supervised training.
