Petriu, Nicolas Rouquette, Oystein Haugen, 2010-09-21 The MODELS series of conferences is the premier venue for the exchange of novative technical ideas and experiences focusing on a very important new technical discipline model driven software and systems engineering The expansion

of this discipline is a direct consequence of the increasing significance and success of model based methods in practice. Numerous efforts resulted in the invention of concepts, languages and tools for the definition, analysis, transformation and verification of domain specific modeling languages and general purpose modeling language standards as well as their use for software and systems engineering. MODELS 2010, the 13th edition of the conference series, took place in Oslo, Norway, October 3-8, 2010, along with numerous satellite workshops, symposia and tutorials. The conference was fortunate to have three prominent keynote speakers: Ole Lehrmann Madsen (Aarhus University, Denmark), Edward A. Lee (UC Berkeley, USA) and Pamela Zave (AT&T Laboratories, USA). To provide a broader forum for reporting on scientific progress as well as on experience stemming from practical applications of model based methods, the 2010 conference accepted submissions in two distinct tracks: Foundations and Applications. The primary objective of the first track is to present new research results dedicated to advancing the state of the art of the discipline, whereas the second aims to provide a realistic and verifiable picture of the current state of the practice of model based engineering so that the broader community could be better informed of the capabilities and successes of this relatively young discipline. This volume contains the final version of the papers accepted for presentation at the conference from both tracks.

Smart Tests Catherine M. Walker, Edgar Schmidt, Kat Mototsune, 2004. High stakes accountability and the growing move towards standardized testing are placing teacher knowledge and assessment skills under ever increasing scrutiny. Teachers know what is going on in their classrooms and have first hand reliable evidence of what their students can accomplish. They can be the major factor in student assessment and help their students better demonstrate what they have learned. Smart Tests shows educators how to create well structured evaluation tools that match assessment tasks to the purpose and content of instruction. Teachers learn how to relate testing directly to classroom goals and activities and make assessment an integral part of learning and teaching, not just the end result. They will find the information they need to build assessment tasks that give students in grades K-8 the opportunity to succeed. These tasks encourage students to apply new knowledge, reflect and defend their thoughts and opinions, and connect what they learn to the world beyond the classroom.

Science Through the Year, Grades 1-2 Laurie Hansen, 2007. Inquiry based and easy to follow activities help students develop positive attitudes toward science. The experiments are aligned with national standards and cover the areas of physical, earth and life science as well as health.
