World Health Organization

Laboratory Process Survey Guide:

Consolidated guidance on tuberculosis data generation and use. Module 3. National tuberculosis prevalence surveys

World Health Organization, 2025-07-10 National TB prevalence surveys are a key tool used by WHO to estimate the burden of TB disease in a country. Repeat surveys allow for the assessment of trends and of the impact of interventions to reduce the burden of disease, thus helping to track progress towards the milestones and targets for reductions in TB incidence set in the WHO End TB Strategy. Between 2007 and 2024, a total of 36 surveys in 32 countries were implemented using the screening and diagnostic methods recommended by WHO. These surveys were guided by two WHO publications: first in 2007 and then in 2011. Since then, major technological developments have occurred and important lessons have been learned from surveys implemented. This new edition is intended to support the design, implementation, analysis, and reporting of national TB prevalence surveys in the period up to about 2030. It includes major revisions to the diagnostic algorithms that are recommended for use in national TB prevalence surveys and, in turn, the case definitions used to count the number of survey participants who have TB disease. Updated guidance on sampling design and the analysis and reporting of data based on the new diagnostic algorithms and case definitions is updated and considerably expanded. Guidance on data management, updated guidance on chest radiography, clinical management, survey management, and field operations, and new chapters on testing for HIV and comorbidities, survey monitoring, comparisons with previous surveys, reporting and dissemination of survey results, and use of survey data.

2012 Comprehensive Accreditation Manual for Laboratory and Point-Of-Care Testing (Camlab) Jcr, 2012

Guidance on implementing patient blood management to improve global blood health status World Health Organization, 2025-03-13 This document has been developed to guide health authorities in implementing patient blood management (PBM) as a national standard of care. The aim is to improve the blood health status of the population in general, as well as to improve patient outcomes, safety, and quality of care while reducing the overall cost of health care. This guidance document also addresses the specific roles of single health care organizations in conducting pilot projects as models for national PBM implementation and later to serve as national PBM reference centres.
