**Fracture of Materials Under Compression Along Cracks** Aleksander N. Guz, Viacheslav L. Bogdanov, Vladimir M. Nazarenko, 2020-07-25 This book addresses the problems of fracture mechanics of materials with cracks under the loading directed along the cracks. It considers two non-classical fracture mechanisms: namely, the fracture of bodies compressed along cracks and the fracture of materials with initial residual stresses acting in parallel to the surfaces of cracks. Location and presents new approaches also including combined one developed in the framework of three-dimensional linearized mechanics of deformable bodies. It then discusses the results of studies on two and three-dimensional problems for various configurations of crack locations in isotropic and anisotropic materials and based on these results critically evaluates the accuracy and applicability limits of the beam approximation approach which is widely used to study various problems of the fracture of bodies under compression along parallel cracks.

**Advanced Mechatronics Solutions** Ryszard Jabłoński, Tomas Brezina, 2015-11-02 Focusing on the most rapidly changing areas of mechatronics, this book discusses signals and system control, mechatronic products, metrology and nanometrology, automatic control, robotics, biomedical engineering, photonics, design, manufacturing and testing of MEMS. It is reflected in the list of contributors including an international group of 302 leading researchers representing 12 countries. The book is intended for use in academic government and industry R & D departments as an indispensable reference tool for the years to come. This volume can serve a global community as the definitive reference source in Mechatronics. The book comprises carefully selected 93 contributions presented at the 11th International Conference Mechatronics 2015 organized by Faculty of Mechatronics, Warsaw University of Technology on September 21-23 in Warsaw, Poland.

**Complex Variable Function Solutions in the Mechanical Analysis of Tunnels** Aizhong Lu, Huaning Wang, Luqing Zhang, 2025-03-03 This book covers the mechanical problems of tunnels in traffic, hydraulic and mining engineering. By extending the complex variable method in mechanical analysis, it proposes accurate analytical solutions for tunnels. The solutions are further applied to the back analysis of tunnels, hole shape optimization, support design and estimation of tunnel stability. The considered rock characteristics involve elasticity, elastoplasticity, viscoelasticity and anisotropy, and various geometric conditions are included, such as circular, noncircular, single, multiple tunnels with/without support at deep/shallow depths. Some original achievements are provided, including new mapping functions for complex regions, precise determination of the noncircular plastic zone around single/twin tunnels and related elastoplastic solutions and quantitative analysis of the interaction between rock and the support, which are new developments of theory and method in rock mechanics. The proposed analytical solutions are reliable tools to initially estimate the design parameters and achieve optimal design, providing guidance in the conceptual stage of the design process. They can clearly reveal the influences of parameters in functional form and provide a benchmark against which the overall correctness of numerical analyses can be assessed. This book summarizes the author's research achievements over more than 20 years. It is
