Multimedia Database Systems

Kingsley C. Nwosu, B. Thuraisingham, P. Bruce Berra, 2012-12-06 Multimedia Database Systems: Design and Implementation Strategies is a compendium of the state of the art research and development work pertaining to the problems and issues in the design and development of multimedia database systems. The chapters in the book are developed from presentations given at previous meetings of the International Workshop on Multi Media Data Base Management Systems (IW MMDBMS) and address the following issues: development of adequate multimedia database models; design of multimedia database query and retrieval languages; design of indexing and organization techniques; development of efficient and reliable storage models; development of efficient and dependable retrieval and delivery strategies; and development of flexible adaptive and reliable presentation techniques. **Database Systems for Advanced Applications**

YoonJoon Lee, Jianzhong Li, Kyu-Young Whang, Doheon Lee, 2004-02-24 This book constitutes the refereed proceedings of the 9th International Conference on Database Systems for Advanced Applications DASFAA 2004 held in Jeju Island, Korea in March 2004. The 60 revised full papers and 18 revised short papers presented together with 2 invited articles were carefully reviewed and selected from 272 submissions. The papers are organized in topical sections on: access methods; query processing in XML; security and integrity; query processing in temporal and spatial databases; semi structured databases; knowledge discovery in temporal and spatial databases; XML and multimedia; and knowledge discovery on the Web; query processing and optimization; classification and clustering; Web search; mobile databases; parallel and distributed databases; and multimedia databases. **Content-Based Video Retrieval**

Milan Petkovic, Willem Jonker, 2013-06-29 The area of content based video retrieval is a very hot area both for research and for commercial applications. In order to design effective video databases for applications such as digital libraries, video production and a variety of Internet applications, there is a great need to develop effective techniques for content based video retrieval. One of the main issues in this area of research is how to bridge the semantic gap between low level features extracted from a video such as color, texture, shape, motion and others and semantics that describe video concept on a higher level. In this book, Dr Milan Petković and Prof Dr Willem Jonker have addressed this issue by developing and describing several innovative techniques to bridge the semantic gap. The main contribution of their research, which is the core of the book, is the development of three techniques for bridging the semantic gap: 1 a technique that uses the spatio-temporal extension of the Cobra framework; 2 a technique based on hidden Markov models; and 3 a technique based on Bayesian belief networks. To evaluate performance of these techniques, the authors have conducted a

number of experiments using real video data The book also discusses domains solutions versus general solution of the problem Petkovi6 and Jonker proposed a solution that allows a system to be applied in multiple domains with minimal adjustments They also designed and described a prototype video database management system which is based on techniques they proposed in the book *Database and Expert Systems Applications* Fernando Galindo,Makoto Takizawa,Roland Traunmueller,2004-08-19 DEXA 2004 the 15th International Conference on Database and Expert Systems Applications was held August 30 September 3 2004 at the University of Zaragoza Spain The quickly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK Conference EC Web Conference EGOVConference Trustbus Conference and DEXA Workshop Every DEXA event has its own conference proceedings which were held in parallel with the DEXA Conference also in Zaragoza In your hands are the results of much effort The work begins with the preparation of the submitted papers which then go through the reviewing process The accepted papers are revised to final versions by their authors and are then arranged within the conference program All culminates in the conference itself For this conference 304 papers were submitted and I want to thank to all who contributed to it they are the real base of the conference The program committee and the supporting reviewers produced altogether 942 referee reports in average 3 1 reports per paper and selected 92 papers for presentation At this point we would like to say many thanks to all the institutions that actively supported this conference and made it possible These were University of Zaragoza FAW DEXA Association Austrian Computer Society *Intelligent Computer Mathematics* Serge Autexier,Jacques Calmet,David Delahaye,P.D.F.
