*Extensive Air Showers* Peter K. F. Grieder, 2010-08-09 Extensive air showers are a very unique phenomenon In the more than six decades since their discovery by Auger and collaborators we have learned a lot about these extremely energetic events and gained deep insight into high energy phenomena particle physics and astrophysics In this Tutorial Reference Manual and Data Book Peter K F Grieder provides the reader with a comprehensive view of the phenomenology and facts of the various types of interactions and cascades theoretical background experimental methods data evaluation and interpretation and air shower simulation He discusses astrophysical aspects of the primary radiation and addresses remaining puzzling questions that cannot yet be answered They remain as a challenge for present and future research in the field The book is split into two volumes Volume I deals mainly with the basic theoretical framework of the processes that determine an air shower and ends with a summary of ways and means to extract information from air shower observations on the primary radiation It also presents a compilation of data of our current knowledge of the high energy portion of the primary spectrum and composition Volume II contains mainly compilations of data of experimental and theoretical nature as well as predictions from simulations of individual air shower constituents Also included are chapters dedicated exclusively to special processes and detection methods Extensive up to date reference lists appear at the end of each chapter Researchers and students working in the field of cosmic ray detection and astroparticle physics will appreciate finding this book in their library

**Generative Programming and Component Engineering** Don Batory, Charles Consel, Walid Taha, 2003-06-30 This volume constitutes the proceedings of the 1st ACM SIGPLAN SIGSOFT International Conference on Generative Programming and Component Engineering GPCE 2002 held October 6-8 2002 in Pittsburgh PA USA as part of the PLI 2002 event which also included ICFP PPDP and a related workshops The future of Software Engineering lies in the automation of tasks that are performed manually today Generative Programming developing programs that synthesize other programs Component Engineering raising the

level of modularization and analysis in application design and Domain Specific Languages elevating program specifications to compact domain specific notations that are easier to write and maintain are key technologies for automating program development. In a time of conference and workshop proliferation GPCE represents a counter trend in the merging of two distinct communities with strongly overlapping interests the Generative and Component Based Software Engineering Conference GCSE and the International Workshop on the Semantics Applications and Implementation of Program Generation SAIG. Researchers in the GCSE community address the topic of program automation from a contemporary software engineering viewpoint SAIG correspondingly represents a community attacking automation from a more formal programming languages viewpoint. Together their combination provides the depth of theory and practice that one would expect in a premier research conference. Three prominent PLI invited speakers lectured at GPCE 2002: Neil Jones, University of Copenhagen; Catuscia Palamidessi, Penn State University; and Janos Sztipanovits, Vanderbilt University. GPCE 2002 received 39 submissions of which 18 were accepted.

*Formal Methods: Foundations and Applications* Márcio Cornélio, Bill Roscoe, 2016-01-23. This book constitutes revised selected papers from the 18th Brazilian Symposium on Formal Methods SBMF 2015 which took place in Belo Horizonte, Brazil, in September 2015. The 11 papers presented in this volume were carefully reviewed and selected from 25 submissions. They were organized in topical sections named: model checking, languages and semantics, refinement and verification, testing and evaluation.

*OpenMP Shared Memory Parallel Programming* Rudolf Eigenmann, 2001-07-18. This book constitutes the refereed proceedings of the International Workshop on OpenMP Applications and Tools WOMPAT 2001 held in West Lafayette, IN, USA, in July 2001. The 15 full papers presented were carefully reviewed and revised for inclusion in the volume. The book presents a state of the art overview on OpenMP shared memory parallel programming. The papers are organized in topical sections on: benchmarking, compiler implementation and optimization, tools and tool technology, OpenMP experience, NUMA machines and clusters, and OpenMP extensions.

*Extremal Optimization* Yong-Zai Lu, Yu-Wang Chen, Min-Rong Chen, Peng Chen, Guo-Qiang Zeng, 2018-09-03. Extremal Optimization Fundamentals: Algorithms and Applications introduces state of the art extremal optimization (EO) and modified EO (MEO) solutions from fundamentals, methodologies and algorithms to applications based on numerous classic publications and the authors' recent original research results. It promotes the movement of EO from academic study to practical applications. The book covers four aspects: beginning with a general review of real world optimization problems and popular solutions with a focus on computational complexity such as NP-hard and the phase transitions occurring on the search landscape; next it introduces computational extremal dynamics and its applications in EO from principles, mechanisms and algorithms to the experiments on some benchmark problems such as TSP, spin glass, Max SAT, maximum satisfiability and graph partition. It then presents studies on the fundamental features of search dynamics and mechanisms in EO with a focus on self-organized optimization, evolutionary probability distribution and structure features, e.g., backbones which are based on

the authors recent research results Finally it discusses applications of EO and MEO in multiobjective optimization systems modeling intelligent control and production scheduling The authors present the advanced features of EO in solving NP hard problems through problem formulation algorithms and simulation studies on popular benchmarks and industrial applications They also focus on the development of MEO and its applications This book can be used as a reference for graduate students research developers and practical engineers who work on developing optimization solutions for those complex systems with hardness that cannot be solved with mathematical optimization or other computational intelligence such as evolutionary computations
