Cryptozoologist Karl Shuker claims that the Bura was a giant lungfish noting that this provides a far more comprehensive, comparable match not only in terms of morphology but also with regard to behaviour. Shuker believes this explains the Bura's alleged ability to survive hidden at the bottom of lakes during the dry season. Shuker's view admirably does nothing to account for the various other horn-like creatures as cited in this article. It also does not account for the spotted fringes of the long neck and forked tongue.
