## ENDOCRINE SYSTEM

**Endocrinology** the scientific study of hormones and the endocrine glands.

- 1. Growth and development
- 2. Metabolic rate, electrolyte and water balance
- 3. Reproductive function and energy balance
- 4. Homeostasis

**How it works:** The endocrine system works with the nervous system to control and regulate cellular activities in the body and maintain homeostasis.

- Endocrine glands release hormones into the bloodstream to regulate cellular activities throughout the body.
- Each hormone has a specific function in the body and has a specific target cell to which it binds to exert its effect on the cell.
- Each hormone specifically binds to a **target cell**.
- A target cell has receptors on its cell membrane designed to respond to that specific hormone.
- When the hormone binds to its receptor, the receptor sends a signal to the cell's nucleus, which then sends a signal to the cell's cytoplasm, resulting in a hormonal response.
