friendly life even if they aren't ready to join a movement or give up bacon. With more than 7.5 billion people on the planet, wildlife is going extinct at the fastest rate since the dinosaurs. Three to four million dogs and cats are killed in shelters every year; billions of chickens, pigs, and cows are killed for food; and countless animals are killed in research labs or their habitat. The numbers are daunting, but there's good news too. Even one person truly can make a difference without breaking the bank. With Stephanie Feldstein's straightforward and encouraging guidance, readers will learn how to take action to create a better world for the animals we love. It starts with changes as simple as taking a shorter shower, skipping meat once a week, wearing this, not that, and extends all the way to online activism and politics. The animals need us, so let's get on with some world-changing.

Energy Efficiency Steven Fawkes, 2016-04-29. Energy risk has reappeared on the corporate and social agenda with a bang, and the complexity of the issues has increased many fold since the days of the last great wave of concern following the oil crises of the 1970s. Steven Fawkes' *Energy Efficiency* is a comprehensive guide for managers and policy makers to the fundamental questions underpinning energy efficiency and our responses to it: what do we really mean by energy efficiency? what is the potential in different dimensions? why is it important? what management processes lead to optimisation of energy efficiency? what technologies are useful for improving energy efficiency? what policies can be used to promote energy efficiency? how can energy efficiency be financed? how can energy suppliers engage with energy efficiency? The result is the most comprehensive review to date of the barriers and opportunities associated with improving energy efficiency. Clearly written and erudite, Steven Fawkes addresses every aspect of energy efficiency, including the huge and vitally important untapped potential offered by effective energy management and the application of existing technology. He also identifies barriers such as the rebound effect and how they can be mitigated, and he provides a comprehensive review of innovative energy efficiency financing options.
