The Analysis and Cognition of Melodic Complexity Eugene Narmour, 1992-11 In this work Eugene Narmour extends the unique theories of musical perception presented in *The Analysis and Cognition of Basic Melodic Structures* The two books together constitute the first comprehensive theory of melody founded on psychological research Narmour's earlier study dealt with cognitive relations between melodic tones at their most basic level After summarizing the formalized methodology of the theory described in that work Narmour develops an elaborate and original symbology to show how sixteen archetypes can combine to form some 200 complex structures that in turn can chain together in a theoretically infinite number of ways He then explains and speculates on the cognitive operations by which listeners assimilate and ultimately encode these complex melodic structures More than 250 musical examples from different historical periods and non Western cultures demonstrate the panstylistic scope of Narmour's model Of particular importance to music theorists and music historians is Narmour's argument that melodic analysis and formal analysis though often treated separately are in fact indissolubly linked *The Analysis and Cognition of Melodic Complexity* will also appeal to ethnomusicologists psychologists and cognitive scientists

The Rhythms of Tonal Music Joel Lester, 1986 The primary focus of this book is accent which Lester argues is one of the major aspects of rhythm The central question is not whether a note or event rest point in time is accented but how it is accented This change of focus allows for the first time a thorough investigation into the factors that give rise to accent the relative importance of these factors in creating accentuation the way accents are perceived the way meter arises and the limits of metric organization on higher levels of structure

Decentering Music Kevin Korsyn, 2004-12-02 As a work of cultural criticism that recalls the concerns of Foucault Hayden White Zizek and others *Decentering Music* examines the struggle for the authority to speak about music at a time when the humanities are in crisis By linking the institutions that support musical research including professional associations and universities to complex historical changes such as globalization and the commodification of knowledge Korsyn undertakes a critique of musical scholarship as an institutional discourse while contributing to a general theory of disciplinary structures that goes beyond the limits of any single field In asking a number of fundamental questions about the models through which disciplinary objects in music are constructed Korsyn suggests unexpected relationships between works of musical scholarship and the cultural networks in which they participate Thus David Lewin's theory of musical perceptions is compared to Richard Rorty's concept of the liberal ironist Susan McClary's feminist narrative of music history is juxtaposed with T S Eliot's dissociation of sensibility and Steven Feld's work in recording the music of the Kaluli people is compared to the treatment of ambient sound in contemporary cinema Developing a framework for interpretation in dialogue with a number of poststructuralist writers Korsyn goes far beyond applying their thought to the analysis of music by showing the cultural dilemmas to which their work responds Korsyn suggests how musical research already participates in these ideas Rather than impose any single method *Decentering Music* empowers readers to choose for themselves by interrogating their own values and ideological commitments exploring the enabling conditions for statements about music By demonstrating the complicity of opposing positions and challenging readers to reexamine their own values *Decentering Music* will surely provoke debate while appealing to readers in a variety of fields and to anyone concerned about the crisis in the humanities
