of the Digital Environmental Humanities Charles Travis, Deborah P. Dixon, Luke Bergmann, Robert Legg, Arlene Crampsie, 2022-09-12. The Routledge Handbook of the Digital Environmental Humanities explores the digital methods and tools scholars use to observe, interpret, and manage nature in several different academic fields. Employing historical, philosophical, linguistic, literary, and cultural lenses, this handbook explores how the digital environmental humanities (DEH) as an emerging field recognises its convergence with the environmental humanities. As such, it is empirically critical and ethically engaged in exploring digitally mediated, visualised, and parsed framings of past, present, and future environments, landscapes, and cultures. Currently, humanities, geographical, cartographical, informatic, and computing disciplines are finding a common space in the DEH and are bringing the use of digital applications, coding, and software into league with literary and cultural studies and the visual film and performing arts. In doing so, the DEH facilitates transdisciplinary encounters between fields as diverse as human cognition, gaming, bioinformatics, and linguistics, social media, literature, and history, music, painting, philology, philosophy, and the earth and environmental sciences. This handbook will be essential reading for those interested in the use of digital tools in the study of the environment from a wide range of disciplines and for those working in the environmental humanities more generally. **Learning Processing** Daniel Shiffman, 2015-09-09.
