How Studying of Mind Works Majorie Cash, 2014-12-25 Don't try and change yourself to fit into their mold nor try and change them to fit ours it is not what we are called to do This book is an analysis of human psychology and personal experience rolled together Visible Learning and the Science of How We Learn John Hattie, Gregory C. R. Yates, 2013-10-08 On publication in 2009 John Hattie's Visible Learning presented the biggest ever collection of research into what actually works in schools to improve children's learning Not what was fashionable not what political and educational vested interests wanted to champion but what actually produced the best results in terms of improving learning and educational outcomes It became an instant bestseller and was described by the TES as revealing education's holy grail Now in this latest book John Hattie has joined forces with cognitive psychologist Greg Yates to build on the original data and legacy of the Visible Learning project showing how its underlying ideas and the cutting edge of cognitive science can form a powerful and complementary framework for shaping learning in the classroom and beyond Visible Learning and the Science of How We Learn explains the major principles and strategies of learning outlining why it can be so hard sometimes and yet easy on other occasions Aimed at teachers and students it is written in an accessible and engaging style and can be read cover to cover or used on a chapter by chapter basis for essay writing or staff development The book is structured in three parts learning within classrooms learning foundations which explains the cognitive building blocks of knowledge acquisition and know thyself which explores confidence and self knowledge It also features extensive interactive appendices containing study guide questions to encourage critical thinking annotated bibliographic entries with recommendations for further reading links to relevant websites and YouTube clips Throughout the authors draw upon the latest international research into how the learning process works and how to maximise impact on students covering such topics as teacher personality expertise and teacher student relationships how knowledge is stored and the impact of cognitive load thinking fast and thinking slow the psychology of self control the role of conversation at school and at home invisible gorillas and the IKEA effect digital native theory myths and fallacies about how people learn This fascinating book is aimed at any student teacher or parent requiring an up to date commentary on how research into human learning processes can inform our teaching and what goes on in our schools It takes a broad sweep through findings stemming mainly from social and cognitive psychology and presents them in a useable format for students and teachers at all levels from preschool to tertiary training institutes

Assessment As Learning Lorna M. Earl, 2003-05-07 Assessment and evaluation are central to educational reform and they represent major shifts in thinking about learning about schools and about teaching Assessment as Learning represents one of these crucial changes but it encompasses more than just using a variety of new techniques **Brain compatible learning for the block** R. Improving Working Memory in Learning and Intellectual Disabilities Silvia Lanfranchi,Barbara Carretti,2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For

instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes
