1. Write a paragraph on any one topic : (15)

a) An experience in a crowded bus.

OR

b) While walking on the road, you suddenly find a one thousand rupees note. What would you like to do with it.

2. a) Write a letter to your friend inviting him/her to join you in a picnic during the winter holidays. (10)

OR

b) Write a letter to your cousin about your hobby.

3. Read the following passage and answer the questions given below :

How often have you returned from a trip to the outdoors disappointed at not having seen any animals? Some days even birds, other than bold and friendly ones, are hard to see. Wait! There are certain explanations for this. Perhaps you were walking too fast or noisily on the dry, leaf-littered forest floor or you were talking non-stop with a friend? Or wearing bright-coloured clothes with a million little things jingling in your pockets? Before setting out, be sure to prepare for your trip.

Always wear dull, earth-coloured clothes in the woods. Never carry or wear shiny, metallic objects. Wild birds and animals are extremely sharp-eyed and alert.

**Ecology, Sustainable Development and Accounting** Seleshi Sisaye, 2015-08-11 Accounting literature has viewed sustainability in terms of social economic and environmental performances There have been concerns that the relationship between sustainability accounting and organizational performance cannot be explained unless we can deduce patterns of administrative behaviour that chronicle management practices Ecology Sustainable Development and Accounting argues that despite the broader social and economic development dimensions of sustainability and the limitations of its extension to corporate and organizational behaviour an ecological framework is capable of providing the overall societal and community chronologies that describe corporate sustainable operations Drawing examples from international development and federal government organizations this book documents the link between ecology corporate sustainable development and sustainability accounting and reporting It draws together the literature from several disciplines to elaborate the contribution of the ecological approach to sustainable development in the accounting literature This book will be of particular interest to students academics and practitioners in the areas of environmental studies ecological economics sustainable development studies and social and environmental accounting The sociological and anthropological perspectives make this book the first of its kind to apply the population ecology of sociology to both the sustainability and accounting literature

**Filamentous Bacteriophage in Bio/Nano/Technology, Bacterial Pathogenesis and Ecology** Jasna Rakonjac, Bhabatosh Das, Ratmir Derda, 2017-02-16

Filamentous phage genus Inovirus infect almost invariably Gram negative bacteria. They are distinguished from all other bacteriophage not only by morphology but also by the mode of their assembly a secretion like process that does not kill the host. Classic Escherichia coli filamentous phage Ff f1 fd and M13 are used in display technology and bio nano technology whereas filamentous phage in general have been put to use by their bacterial hosts for adaptation to environment pathogenesis biofilm formation horizontal gene transfer and modulating genome stability. Many filamentous phage have a symbiotic life style that is often manifested by inability to form plaques preventing their identification by standard phage hunting techniques while the absence or very low sequence conservation between phage infecting different species often complicates their identification through bioinformatics. Nevertheless the number of discovered filamentous phage is increasing rapidly along with realization of their significance. Temperate filamentous phage whose genomes are integrated into the bacterial chromosome of pathogenic bacteria often modulate virulence of the host. The Vibrio cholerae phage CTXf genome encodes cholera toxin whereas many filamentous prophage influence virulence without encoding virulence factors. The nature of their effect on the bacterial pathogenicity and overall physiology is the next frontier in understanding intricate relationship between the filamentous phage and their hosts. Phage display has been widely used as a combinatorial technology of choice for discovery of therapeutic antibodies and peptide leads that have been applied in the vaccine design diagnostics and drug development or targeting over the past thirty years. Virion proteins of filamentous phage are integral membrane proteins prior to assembly hence they are ideal for display of bacterial surface and secreted proteins. The use of this technology at the scale of microbial community has potential to identify host interacting proteins of uncultivable or low represented community members. Recent applications of Ff filamentous phage extend into protein evolution synthetic biology and nanotechnology. In many applications phage serves as a monodisperse long aspect nano scaffold of well defined shape. Chemical or genetic modifications of this scaffold are used to introduce the necessary functionalities such as fluorescent labels ligands that target specific proteins or peptides that promote formation of inorganic or organic nanostructures. We anticipate that the future holds development of new strategies for particle assembly site specific multi functional modifications and improvement of existing modification strategies. These improvements will render the production of filamentous phage templated materials safe and affordable allowing their applications outside of the laboratory.
