

For each rational function, find any points of discontinuity.

$$y = \frac{1}{x^2 - 16}$$

$$y = \frac{x^2 - 1}{x^2 + 3}$$

$$y = \frac{x + 1}{x^2 + 2x - 8}$$

**Mathematical System Theory** Athanasios C. Antoulas, 2013-04-17 Over the past three decades R E Kalman has been one of the most influential personalities in system and control theory His ideas have been instrumental in a variety of areas This is a Festschrift honoring his 60th birthday It contains contributions from leading researchers in the field giving an account of the profound influence of his ideas in a number of areas of active research in system and control theory For example since their introduction by Kalman in the early 60 s the concepts of controllability and observability of dynamical systems with inputs have been the corner stone of the great majority of investigations in the field      *Multidimensional Similarity Structure Analysis* I. Borg, J. Lingo, 2012-12-06 Multidimensional Similarity Structure Analysis comprises a class of models that represent similarity among entities for example variables items objects persons etc in multidimensional space to permit one to grasp more easily the interrelations and patterns present in the data The book is oriented to both researchers who have little or no previous exposure to data scaling and have no more than a high school background in mathematics and to investigators who would like to extend their analyses in the direction of hypothesis and theory testing or to more intimately understand these analytic procedures The book is replete with examples and illustrations of the various techniques drawn largely but not restrictively from the social sciences with a heavy emphasis on the concrete geometric or spatial aspect of the data representations      *Mathematical Reviews*, 2005      **Curriculum Review**, 1985      Canadiana, 1986      *Journal of Education*, 1884      **Linear Algebra with Applications** Jeffrey Holt, 2013-04-01 Many students of linear algebra hit a wall at mid semester Having spent the first part of the term doing mostly computational work they are unprepared for the rigors of conceptual thinking in an abstract setting that is frequently the focus of the second half of the course Holt s Linear Algebra with Applications blends computational and conceptual topics throughout Early treatment of conceptual topics in the context of Euclidean space gives students more time and a familiar setting in which to absorb them

This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in most texts. Abstract vector spaces are introduced later once students have developed a solid conceptual foundation. Concepts and topics are frequently accompanied by applications to provide context and motivation. Because many students learn by example, Linear Algebra with Applications provides a large number of representative examples over and above those used to introduce topics. The text also has over 2500 exercises covering computational and conceptual topics over a range of difficulty levels.
