Written by experts in the field this volume presents a comprehensive investigation into the relationship between
argumentation theory and the philosophy of mathematical practice Argumentation theory studies reasoning and argument
and especially those aspects not addressed or not addressed well by formal deduction The philosophy of mathematical
practice diverges from mainstream philosophy of mathematics in the emphasis it places on what the majority of working
mathematicians actually do rather than on mathematical foundations The book begins by first challenging the assumption
that there is no role for informal logic in mathematics Next it details the usefulness of argumentation theory in the
understanding of mathematical practice offering an impressively diverse set of examples covering the history of mathematics
mathematics education and perhaps surprisingly formal proof verification From there the book demonstrates that
mathematics also offers a valuable testbed for argumentation theory Coverage concludes by defending attention to
mathematical argumentation as the basis for new perspectives on the philosophy of mathematics *The Publishers Weekly*
