Holt Geometry, 2001 *Academic Language in Diverse Classrooms: Mathematics, Grades 6–8* Margo Gottlieb, Gisela Ernst-Slavit, 2013-05-09 Make every student fluent in the language of learning The Common Core and ELD standards provide pathways to academic success through academic language Using an integrated Curricular Framework districts schools and professional learning communities can Design and implement thematic units for learning Draw from content and language standards to set targets for all students Examine standards centered materials for academic language Collaborate in planning instruction and assessment within and across lessons Consider linguistic and cultural resources of the students Create differentiated content and language objectives Delve deeply into instructional strategies involving academic language Reflect on teaching and learning *Surface/Volume* Alan E. Rubin, 2023-02-28 This book explains that diffusion osmosis dissolution evaporation and heat loss all preferentially affect small bodies due to their high surface volume ratios Because surface area increases as the square of length but volume and mass increase as the cube large objects have low surface volume ratios and small objects have high surface volume ratios This simple physical constraint governs much of the physical world It accounts for why the Earth has active volcanoes but the Moon does not why the human brain has numerous folds why deciduous trees lose their leaves every Fall and why nanoparticles of gold melt at surprisingly low temperatures It is a phenomenon well known to every scientist but this book is the first comprehensive treatment of this effect *Geometry* Holt Rinehart & Winston, 2001 **Evolutionary Neuroscience** Jon H Kaas, 2009-07-28 Evolutionary Neuroscience is a collection of articles in brain evolution selected from the recent comprehensive reference *Evolution of Nervous Systems* Elsevier Academic Press 2007 The selected chapters cover a broad range of topics from historical theory to the most recent deductions from comparative studies of brains The articles are organized in sections focused on theories and brain scaling the evolution of brains from early vertebrates to present day fishes amphibians reptiles and birds the evolution of mammalian brains and the evolution of primate brains including human brains Each chapter is written by a leader or leaders in the field and has been reviewed by other experts Specific topics include brain character reconstruction principles of brain scaling basic features of vertebrate brains the evolution of the major sensory systems and other parts of brains what we can learn from fossils the origin of neocortex and the evolution of specializations of human brains The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present day vertebrates This book would be of use to students at the graduate or undergraduate levels as well as professional neuroscientists cognitive scientists and psychologists Together the chapters provide a comprehensive list of further reading and references for those who want to inquire further The most comprehensive authoritative and up to date single volume collection on brain evolution Full color throughout with many illustrations Written by leading scholars and experts Passport to Algebra and Geometry Christine A.
