Advances in Fisheries Science Andrew I. L. Payne, John Cotter, Ted Potter, 2009-01-22. This timely book brings readers up to date on the wide range of advances made in fisheries science since the publication in 1957 of *On the Dynamics of Exploited Fish Populations*. Beverton and Holt regarded by many fisheries scientists as one of the most important books on fisheries yet published. Traditional fishery subjects covered include historic declines and changes in fishing fleets, fisheries management and stock assessments, data-poor situations, simulation and modelling of fished stocks, fisheries economics, assessing reproductive potential and dispersal of larvae, fisheries for sharks and rays and use of marine technology. Additionally, related subjects of increasing importance now that ecological approaches to management are coming to the fore are presented. They include benthic ecology, ecosystem changes linked to fishing, life history theory, the effects of chemicals on fish reproduction and use of sounds in the sea by marine life. Several chapters offer stimulating philosophical discussion of the many controversial areas still existing. This significant book edited by Andy Payne, John Cotter and Ted Potter and containing contributions by world-renowned fisheries scientists including many based at Cefas where Beverton and Holt's original work was carried out is an essential purchase for fisheries managers and scientists, fish biologists, marine scientists and ecologists. Libraries in all universities and research establishments where fisheries and biological sciences are studied and taught are likely to need copies of this landmark publication.

Vayda,2009-05-15 In this collection of recent essays Andrew P Vayda argues for a pragmatic approach to explanation and explanation oriented research in social and environmental sciences He supports his arguments with causal analyses of both human actions such as cutting down trees and fighting over resources and environmental changes such as forest fires and he voices his opposition to methodological and ethnographic holism and the notion that explanation can be achieved by deploying theories rather than by obtaining evidence of the causal histories of concrete actions and events Vayda is critical of much recent scholarship\_in such areas as political ecology local knowledge studies discourse studies and evolutionary human behavioral ecology\_for its indifference to questions of evidence and methodology and its failure to give proper consideration to multiple and alternative possible causes of whatever is being explained He also discusses the use and misuse of evidence and generalizations the payoffs and pitfalls of moving from one level of analysis to another the dos and don ts in interdisciplinary research the uses of statistics and the importance of being clear about objects of explanation This original and challenging work makes sense of the future of ecological anthropology and will be of interest to researchers in the social and environmental sciences in general      **Evolution** Monroe W.
