

Chapter 13 – How Populations Evolve: Explaining the Diversity of Life

Charles Darwin - *On the Origin of Species by Means of Natural Selection*, 1859.

What was before Darwin?

Aristotle -

Jean-Baptiste de Lamarck, 1800s

Refinement of traits, organisms successful in environment

Change over time, but

Charles Darwin and *The Origin of Species*

Charles Darwin

proposed a hypothesis, evidence

Five-year voyage on the HMS Beagle -

Naturalist - collected thousands of specimens and observed various adaptations in organisms

New Insights

Darwin was strongly influenced by the writings of geologist Charles Lyell.

Lyell suggested that Earth is

Thus, extended time scale allowing gradual changes to occur in species and in geologic features

Darwin returns to England

Gathers data and comes up with:

"descent with modification"

Proposes a mechanism - natural selection.

In natural selection, individuals with certain inherited traits are

Evolution: Darwin's Theory

Alfred Russell Wallace

Worked in Indonesia

mid 1850's, developed similar ideas to Darwin

Presented to the scientific community

Soon after Darwin publishes *On the Origin of Species by Means of Natural Selection*

Controversial

More than just a hypothesis, theory

Verified by more than 150 years of research.

Darwin publishes *On the Origin of Species by Means of Natural Selection*, making two proposals:

1. Existing species descended from
2. Natural selection is

Evolution - Genetic change in a population or species over generations

Population -

Living species are descendants of ancestral species that were different from present-day ones.

Evidence of Evolution

Biological evolution has left evidence:

Evidence from Fossils

Fossils - imprints or remains of organisms that lived in the past

Sedimentary rock

Paleontologists -

Not all fossils are the actual remnants of organisms.

Sometimes, an entire organism is preserved

Amber, Frozen in ice, Preserved in bogs

Clinical Informatics Study Guide John T. Finnell, Brian E. Dixon, 2022-04-22 This completely updated study guide textbook is written to support the formal training required to become certified in clinical informatics. The content has been extensively overhauled to introduce and define key concepts using examples drawn from real world experiences in order to impress upon the reader the core content from the field of clinical informatics. The book groups chapters based on the major foci of the core content: health care delivery and policy, clinical decision making, information science and systems, data management and analytics, leadership and managing teams, and professionalism. The chapters do not need to be read or taught in order, although the suggested order is consistent with how the editors have structured their curricula over the years. Clinical Informatics Study Guide Text and Review serves as a reference for those seeking to study for a certifying examination independently or periodically reference while in practice. This includes physicians studying for board examination in clinical informatics as well as the American Medical Informatics Association (AMIA) health informatics certification. This new edition further refines its place as a roadmap for faculty who wish to go deeper in courses designed for physician fellows or graduate students in a variety of clinically oriented informatics disciplines such as nursing, dentistry, pharmacy, radiology, health administration, and public health.

Foundations of Nursing in the Community - E-Book Marcia Stanhope, Jeanette Lancaster, 2013-10-15 With concise, focused coverage of community health nursing, Foundations of Nursing in the Community: Community Oriented Practice, 4th Edition, provides essential information for community practice from nursing roles and care settings to vulnerable population groups. The book uses a practical, community-oriented approach and places an emphasis on health promotion and disease prevention. Practical application of concepts is highlighted throughout the text in case studies, critical thinking activities, QSEN competencies, and Healthy People 2020 objectives. Evidence-Based Practice boxes highlight current research findings, their application to practice, and how community public health nurses can apply the study results. Levels of Prevention boxes identify specific nursing interventions at the primary, secondary, and tertiary levels to reinforce the concept of prevention as it pertains to community and public health care. Focus on health promotion throughout the text emphasizes initiatives, strategies, and interventions that promote the health of the community. Clinical Application scenarios offer realistic situations with questions and answers to help you apply chapter concepts to practice in the community. Case Studies provide client scenarios within the community public health setting to help you develop assessment and critical thinking skills. What Would You Do boxes present problem-solving challenges that encourage both independent and collaborative thinking required in community settings. How To boxes offer specific instructions on nursing interventions. NEW QSEN boxes illustrate how quality and safety goals, competencies, objectives, knowledge, skills, and attitudes can be applied in nursing practice in the community. NEW Feature box on Linking Content to Practice highlights how chapter content is applied in the role of public community health nursing. NEW Healthy People 2020

objectives in every chapter address the health priorities and emerging health issues expected in the next decade **Study Guide and Laboratory Manual for Physical Examination and Health Assessment, Canadian Edition- E-Book** Carolyn Jarvis, Ann L. Eckhardt, 2023-02-23 NEW Preface includes an overview of the NCSBN Clinical Judgement Measurement Model PN competencies and the REx PN NEW Clinical judgement exercises equip students for success on the Next Generation NCLEX NGN including questions with an increased focus on clinical judgement Updated content throughout corresponds to the 4th Canadian edition of the textbook and incorporates the latest research and evidence informed practice **Infectious Disease Ecology of Wild Birds** Jennifer C. Owen, Dana M. Hawley, Kathryn P. Huyvaert, 2021-06-30 Birds are the most diverse group of land vertebrates and have evolved to exploit almost every terrestrial niche on earth They also serve as a natural reservoir for an array of different pathogens that pose serious health risks to human and domestic animal populations including West Nile virus highly pathogenic avian influenza viruses Newcastle Disease virus and numerous enteric pathogens Avian diseases are also critically important to the conservation of endemic bird species in many places around the world This accessible textbook focuses on the dynamics of infectious diseases for wild avian hosts across every level of ecological hierarchy from the way pathogens interact with the physiology and behavior of individual hosts the evolutionary and ecological dynamics of the host parasite interactions occurring within populations up to the complex biotic and abiotic interactions occurring within biological communities and ecosystems Parasite bird interactions are also increasingly occurring in rapidly changing global environments thus their ecology is also changing and this shapes the complex ways by which parasites influence the inter connected health of birds humans and shared ecosystems Given the key role of birds in ecological communities more broadly and as the primary host to so many zoonotic pathogens an understanding of the ecological and evolutionary principles underlying the maintenance amplification transmission and dispersal of these infectious agents is crucial to understanding how to mitigate the negative global impacts of the ever increasing number of emerging infectious diseases Although the topics and principles discussed in this book relate to birds they have a far wider relevance and can also be applied to non avian wildlife host pathogen systems The COVID 19 pandemic has shown that understanding of disease ecology in wild animal populations is paramount to global health Infectious Disease Ecology of Wild Birds is suitable for both senior undergraduate and graduate students taking courses in avian disease ecology ecoimmunology ecology and conservation It will also appeal to the many professional parasitologists ecoimmunologists ornithologists behavioural ecologists conservation biologists and wildlife biologists requiring a concise overview of the topic The Biology Teacher's Handbook Biological Sciences Curriculum Study, 2009 BSCS experts have packed this volume with the latest most valuable teaching ideas and guidelines No matter the depth of your experience gain insight into what constitutes good teaching how to guide students through inquiry and how to create a culture of inquiry using science notebooks and other strategies **Introductory Ecology** Peter Cotgreave, Irwin Forseth, 2002-02-01 In this age of

increasing human domination of the Earth's biological and physical resources a basic understanding of ecology is more important than ever. Students need a textbook that introduces them to the basic principles of ecological science, one that is relevant to today's world and one that does not overwhelm them with detail and jargon. Peter Cotgreave and Irwin Forseth have designed this book to meet the needs of these students by providing a basic synthesis of how individual organisms interact with their physical environment and with each other to generate the complex ecosystems we see around us. The unifying theme of the book is biodiversity: its patterns, causes, and the growing worldwide threats to it. Basic ecological principles are illustrated using clearly described examples from the current ecological literature. This approach makes the book valuable to all students studying ecology. Examples have been chosen carefully to represent as wide a range of ecosystems: terrestrial and aquatic, northern and southern hemisphere, and life forms: animal, plant, and microbe, as possible. Particular attention is paid to consequences of global change on organisms, populations, ecological communities, and ecosystems. The end result is a text that presents a readable and persuasive picture of how the Earth's natural systems function and how that functioning may change over the coming century. Features include strong coverage of applied and evolutionary ecology, applications of ecology to the real world, a question-oriented approach, the only comprehensive treatment of ecology written for the introductory student, an emphasis on definitions of key words and phrases, an integration of experimental, observational, and theoretical material, examples drawn from all over the world, and a wide variety of organisms. A logical structure, building from the response of individual organisms to physical factors through population growth and population interactions to community structure and ecosystem function, suggested further reading lists for each chapter, boxes to explain key concepts in more depth, a dedicated website featuring additional information and teaching aids, www.blackwellpublishing.com/cotgreave. Peter Cotgreave is an animal ecologist who has worked for the University of Oxford and the Zoological Society of London. His research interests centre on abundance and rarity within animal communities. Irwin Forseth is a plant physiological ecologist who has taught introductory ecology and plant ecology at the University of Maryland since 1982. His research focuses on plant responses to the environment. The authors have studied organisms as diverse as green plants, insects, and mammals in habitats from deserts to tropical rainforests. They have worked in ecological research and education in Africa, Asia, North and South America, Europe, and the Caribbean.
