

Organization of a Research Paper:

Introduction

A good introduction is relatively short. It tells why the reader should find the paper interesting, explains why the author carried out the research, and gives the background the reader needs to understand and judge the paper.

Specifically, the Introduction defines the nature and extent of the problems studied, relates the research to previous work (usually by a brief review of the literature clearly relevant to the problem), explains the objectives of investigation, and defines any specialized terms or abbreviations to be used in what follows. Remember that the Introduction leads logically to, and clearly states, the hypothesis or principal theme of the paper.

The Introduction should be relatively brief; most journals recommend less than 500 words. Avoid repetition: do not repeat the Abstract in the Introduction (and Introduction in the Discussion). Do not go into an extensive literature review; two to four most relevant and recent citations should be adequate to corroborate a statement. Do not repeat well-known facts nor state the obvious. For example, it is disappointing that even now, i.e., after more than 30 years of concerted efforts in scientific agroforestry and a large volume of literature in the subject, some manuscripts—and, interestingly, some editors—insist on providing a definition of agroforestry in any article on that subject! The Introduction section also may use different tenses: justification and motivation of the study is presented in present tense ("Soils store relatively large amounts of carbon in terrestrial ecosystems."), whereas the review of literature is presented in past tense ("Studies showed that ..."), or in present perfect tense if it is common knowledge ("Studies have shown that ..."). The objective is written in past tense ("The objective of the current study was ..."). Different journals follow different norms and styles. Some want discussion of literature in the Introduction while some want it in the Discussion section. Some journals require a brief account of the Materials and Methods to be included in the Introduction section, and some may want even the important conclusions presented in the Introduction section, although that tendency is now disappearing.

From Research to Manuscript Michael Jay Katz, 2009-01-21 Observations Plus Recipes It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are

explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers *Nutrition Research* Drummond, Alison Murphy-Reyes, 2017-02-10 Nutrition Research Concepts Applications is written for nutrition students in undergraduate and graduate programs who are beginning to develop the skills necessary to become knowledgeable research consumers conduct and document research projects and understand how to use research findings in practice The first text of its kind to clearly explain each section of a research paper to students who are new at the process this title outlines how to read and analyze research by learning concepts such as sampling design or relative risk and then seeing these abstract ideas brought to life in actual research articles Students also apply these concepts in Application Questions and Critical Thinking Exercises in which they write abstracts answer questions about evidenced based study data or use a checklist to critique a study Students also learn the nuts and bolts of searching databases for appropriate articles using systematic reviews such as the Academy of Nutrition and Dietetics QUALITATIVE RESEARCH FOR SOCIAL SCIENCES Dr. A. A. Gadwal, 2022-03-01 The social sciences are the group of academic discipline that study the different aspects of human and his associates It is the study of behaviour of man social institutions social stratification and social process and is the discipline that focuses on the study of social behaviour Social sciences are clearly distinctive from the physical sciences i e the study of non living system Human beings are much curious and inquisitive about themselves their nature their behaviour as individual and as group and their relationship to natural environment There is much fluidity over which area should be included and covered under social sciences Anthropology Economic Political science History Psychology Sociology Social Work Law Communication and Education are included as the aspects and area of study The term Social Science first appeared in the Book An Inquiry Into The Principles Of The Distribution Of Wealth Most Conducive To Human Happiness by William Thomas in the year 1824 The term social science refers to all those disciplines which analyse society and culture from Anthropology to Media studies
