It details all aspects of providing essential reference services in the context of the AASL Standards, the Common Core State Standards, and the evolving role of today's school librarian. Author Scott Lanning emphasizes service and instruction while addressing topics such as inquiry, critical thinking, building core reference skills, electronic and Web resources, leadership skills, and virtual reference services. The book begins with chapters that discuss information and the information seeking process. The following sections cover the provision of reference services, methods for teaching information literacy, the use of electronic resources in general, and the creation of library resources that support reference and instruction. The text concludes with an assessment of the value of reference and instruction services to the school and beyond.

TEXT BOOK OF BIOSTATISTICS AND RESEARCH METHODOLOGY Dr. Kapil Pal, Dr. Nidhi Sharma, Dr. Abhishek Dwivedi, Dr. Dipanwita Chaudhuri Sil; Dr. Rupesh Kumar Mani, 2025-04-25

The Textbook of Biostatistics and Research Methodology is a comprehensive guide designed for students, researchers, and professionals in pharmaceutical and biomedical sciences. It provides fundamental concepts and practical applications of statistical methods used in research and industry. The book begins with measures of central tendency covering mean, median, and mode, with pharmaceutical examples helping readers understand data distribution in research. It then explores measures of dispersion including range and standard deviation, which are crucial for analyzing variability in drug formulations and clinical studies. A dedicated section on correlation explains Karl Pearson's coefficient and multiple correlation techniques, providing real-world pharmaceutical applications. The regression analysis chapter covers curve fitting, least squares method, and multiple regression, aiding in predictive modeling of drug responses. The book delves into probability distributions including binomial, normal, and Poisson distributions, along with sampling techniques, hypothesis testing, and standard error concepts used in pharmaceutical research. Parametric tests such as t tests, ANOVA, and least significance difference methods are thoroughly explained for comparing sample groups in clinical trials. For non-parametric analysis, tests like the Wilcoxon Rank Sum Test, Mann-Whitney U Test, Kruskal-Wallis Test, and Friedman Test are covered, offering alternatives for non-normally distributed data. The introduction to research methodology discusses the importance of experimental design, plagiarism, and ethical research practices. The book also covers graphical data representation through histograms, pie charts, cubic graphs, response surface plots, and contour plots, enhancing statistical analysis visualization. The methodology design chapter includes sample size determination, data presentation, and protocol development for cohort and clinical studies. A section on regression modeling explains hypothesis testing in simple and multiple regression models, incorporating industrial and clinical trial applications using Excel, SPSS, MINITAB, and R software. It also introduces the Design and Analysis of Experiments with factorial designs, response surface methodology, and optimization techniques. With its structured approach, practical pharmaceutical examples, and in-depth statistical concepts, this textbook is an essential resource for students and professionals involved in biostatistics, clinical research, and pharmaceutical industry applications.
