The Political Economy of Regulation in Turkey Tamer Çetin,Fuat Oğuz,2011-01-12 The Political Economy of Regulation in Turkey brings together leading international scholars and experts on Turkey and regulatory reform to provide essential information on the recent Turkish experience and its relation to competition policy After the 1980 liberalization reform Turkey tried to introduce competition in many industries but network industries have remained as monopolies At the end of the 1990s regulatory reform was initiated and independent regulatory agencies have been established by the

government Comprehensive discussions of these network industries in particular airlines electricity natural gas telecommunications and environment regulations are offered The contributors inquire how economic theory and historical analyses can enlighten the character of market processes and the role for government action in these industries and the contributions shed light on the very recent changes in the regulatory structure and important legal cases that shape the future of regulated industries This book discusses these issues in an international perspective and relates the Turkish experience to other similar countries such as in Eastern Europe and Central America This book serves as a useful guide to those who want to understand major changes in Turkey and regulatory reforms in other emerging markets making it of interest to researchers and PhD students concerned with regulatory economics the Turkish economy and economic policy in emerging markets

Wiring Principles of Cerebral Cortex Julian Budd, Zoltán F. Kisvárdy, 2015-11-17 Cerebral cortex is probably the most complex biological network Here many millions of individual neurons the functional units of cortex are interconnected through a massive yet highly organized pattern of axonal and dendritic wiring This wiring enables both near and distant cells to coordinate their responses and generate a rich variety of cognitions and behaviours When the wiring is damaged through disease or trauma it may reorganize but this may lead to characteristic pathological behaviours While there have been significant advances in mapping cortical connectivity the organizing principles and function of this connectivity are not well understood On the one hand there appears to be general design constraints governing cortical wiring as first recognised by Ramon y Cajal's in his laws of conduction material and volume conservation Yet on the other hand particular patterns of cortical wiring exist to serve specific functions There is a wide gap in understanding how the response and connectivity properties of a single neuron contribute to emergent network functions such as in detecting perceptually relevant features Unravelling this intimate causal relationship represents one of the major challenges in neuroscience This Research Topic will examine progress in understanding cortical wiring principles This Research Topic aims to draw together recent advances in methods and understanding as well as recent challenges to existing ideas about how cerebral cortex is wired This is particularly timely because new automated techniques may soon yield huge datasets in need of explanation Recent studies have for instance empirically evaluated Ramon y Cajal's conservation laws for cerebral cortex while others have shown some unexpected connectivity features that may refine the traditional view of how corticocortical connections are organised with regard to functional representations of auditory somatosensory and visual cortices Understanding these data will help improve the fidelity of neural models of cerebral cortical function and take into account the diversity of connections at both micro and mesoscopic scales not seen at such a depth before
