**Distribution for Mobile Internet: A Cloud-based Approach** Zhenhua Li, Yafei Dai, Guihai Chen, Yunhao Liu, 2023-02-14  
Content distribution i.e. distributing digital content from one node to another node or multiple nodes is the most fundamental function of the Internet Since Amazon's launch of EC2 in 2006 and Apple's release of the iPhone in 2007 Internet content distribution has shown a strong trend toward polarization On the one hand considerable investments have been made in creating heavyweight integrated data centers heavy cloud all over the world in order to achieve economies of scale and high flexibility efficiency of content distribution On the other hand end user devices light end have become increasingly lightweight mobile and heterogeneous creating new demands concerning traffic usage energy consumption bandwidth latency reliability and or the security of content distribution Based on comprehensive real world measurements at scale we

observe that existing content distribution techniques often perform poorly under the abovementioned new circumstances. Motivated by the trend of heavy cloud vs light end, this book is dedicated to uncovering the root causes of today's mobile networking problems and designing innovative cloud-based solutions to practically address such problems. Our work has produced not only academic papers published in prestigious conference proceedings like SIGCOMM, NSDI, MobiCom, and MobiSys, but also concrete effects on industrial systems such as Xiaomi Mobile MIUI OS, Tencent App Store, Baidu PhoneGuard, and WiFi.com. A series of practical takeaways and easy-to-follow testimonials are provided to researchers and practitioners working in mobile networking and cloud computing. In addition, we have released as much code and data used in our research as possible to benefit the community.
