Problem Set 6: THE HYPERBOLA

Direction: Answer the following problems and show the complete solution. Take a screenshot of your output handwritten on short bond papers and upload it properly in our canvas.

1. Find the equation of a hyperbola that has the y axis as the transverse axis, a center at $(0, 0)$ and passes through the points $(0, 5)$ and $(2, 5\sqrt{2})$.

Answer: $-25x^2 + 4y^2 - 100 = 0$

2. Find the equation of a hyperbola whose vertices are at $(0, -3)$ and $(0, 3)$ and has a focus at $(0, 5)$.

Answer: $-9x^2 + 16y^2 - 144 = 0$

Higher Mathematics for Engineering and Technology Mahir M. Sabzaliev,Ilhama M. Sabzalieva,2018-05-03 Based on and enriched by the long term teaching experience of the authors this volume covers the major themes of mathematics in engineering and technical specialties The book addresses the elements of linear algebra and analytic geometry differential calculus of a function of one variable and elements of higher algebra On each theme the authors first present short theoretical overviews and then go on to give problems to be solved The authors provide the solutions to some typical relatively difficult problems and guidelines for solving them The authors consider the development of the self dependent thinking ability of students in the construction of problems and indicate which problems are relatively difficult The book is geared so that some of the problems presented can be solved in class and others are meant to be solved independently An extensive explanatory solution of at least one typical problem is included with emphasis on applications formulas and rules This volume is primarily addressed to advanced students of engineering and technical specialties as well as to engineers technicians and instructors of mathematics Key features Presents the theoretical background necessary for solving problems including definitions rules formulas and theorems on the particular theme Provides an extended solution of at least one problem on every theme and guidelines for solving some difficult problems Selects problems for independent study as well as those for classroom time taking into account the similarity of both sets of problems Differentiates relatively difficult problems from others for those who want to study mathematics more deeply Provides answers to the problems within the text rather than at the back of the book enabling more direct verification of problem solutions Presents a selection of problems and solutions that are very interesting not only for the students but also for professor teacher staff **Algebra From A To Z -**

Volume 2 A W Goodman,2001-09-04 This book presents a thorough explanation of the notation of summation some unusual material on inequalities an extended treatment of mathematical induction and basic probability theory including the explanation that all gambling systems must fail It also contains a complete treatment of vector algebra including the dot and cross product This is usually reserved for a calculus course but is properly algebra and so belongs in any algebra book Since this book deals with algebra from A to Z it starts at the beginning with the arithmetic of the counting numbers and their extensions i e the negative numbers and the rational numbers However these very elementary items are treated from an advanced point of view The teacher should assign the first three chapters as outside reading using only one day per chapter for classroom discussion The remaining chapters cover all of the usual topics in college algebra but they contain many unusual items not found in the standard college algebra course As an example the circle notation for a composite function is now standard material but this book explains just why that notation is needed The book concludes with a presentation of the Peano Axioms This advanced topic should be available to all mathematics students whether they are first year algebra students or are working for a PhD degree
