Functional Reconstruction of the Urinary Tract and Gynaeco-Urology Richard Turner-Warwick, Christopher R. Chapple, 2002-07-09 This lavishly illustrated operative atlas consists of detailed step by step descriptions of the procedures used in reconstruction of the female urinary tract from the kidney to the urethra. It is based on the extensive operative experience of two very experienced reconstructive urologists. The procedures described have been devised completely afresh or considerably developed during the course of many thousands of operations and thus represent a unique collection. Many of the procedures and tips have not been published before. The approach taken throughout the book is a functional one. The basic principles underlying reconstructive urology are outlined and emphasis is placed on the fact that the logic of each procedure is dictated by a thorough understanding of the particular functional abnormality involved. In addition, there is a wealth of practical tips, observations, and clinical pearls built up over many years of surgical experience which help to reduce complications and make operations easier. Each operative procedure is described by a sequence of colour photographs with running captions explaining the pitfalls and points of particular importance at each stage. It will be an indispensable guide to reconstructive urology for urologists and gynaecologists alike.
