Gce Intergrated Science:

Food Security and Global Environmental Change John Ingram, Polly Ericksen, Diana Liverman, 2012-07-26 Global environmental change GEC represents an immediate and unprecedented threat to the food security of hundreds of millions of people especially those who depend on small scale agriculture for their livelihoods As this book shows at the same time agriculture and related activities also contribute to GEC by for example intensifying greenhouse gas emissions and altering the land surface Responses aimed at adapting to GEC may have negative consequences for food security just as measures taken to increase food security may exacerbate GEC The authors show that this complex and dynamic relationship between GEC and food security is also influenced by additional factors food systems are heavily influenced by socioeconomic conditions which in turn are affected by multiple processes such as macro level economic policies political conflicts and other important drivers The book provides a major accessible synthesis of the current state of knowledge and thinking on the relationships between GEC and food security Most other books addressing the subject concentrate on the links between climate change and agricultural production and do not extend to an analysis of the wider food system which underpins food security this book addresses the broader issues based on a novel food system concept and stressing the need for actions at a regional rather than just an international or local level It reviews new thinking which has emerged over the last decade analyses research methods for stakeholder engagement and for undertaking studies at the regional level and looks forward by reviewing a number of emerging hot topics in the food security GEC debate which help set new agendas for the research community at large Published with Earth System Science Partnership GECAFS and SCOPE Communicating Global Change Science to Society Holm Tiessen, 2007-07-02 Publisher description *Understanding the Earth System* Eckart Ehlers, 2001-06-20 Understanding the Earth System aims to contribute to the timely discussion on Global Change of the Earth system The discussion centers around the synthesis of procedures effecting both the natural and social sciences The concept of Earth System Analysis although controversially discussed will be the focus of future scientific programs related to Global Change The main problems are overpopulation water shortages and climate change Science and the politics of openness Brigitte Nerlich, Sarah Hartley, Sujatha Raman, Alexander Smith, 2018-02-07 This electronic version has been made available under a Creative Commons BY NC ND open access license The phrase here be monsters or here be dragons is commonly believed to have been used on ancient maps to indicate unexplored territories which might hide unknown beasts This book maps and explores places between science and politics that have been left unexplored sometimes hiding in plain sight in an era when increased emphasis was put on openness The book is rooted in a programme of research funded by the Leverhulme Trust entitled Making Science Public Challenges and opportunities which runs from 2014 to 2017 One focus of our research was to critically question the assumption that making science more open and public could solve various issues around scientific credibility trust and legitimacy Chapters in this book explore the risks and benefits of this perspective with relation

to transparency responsibility experts and faith
