

4 Hardware Commands

4.1 Turning ON the GE865

To turn on the GE865 the pad ON# must be tied low for at least 1 seconds and then released. The maximum current that can be drained from the ON# pad is 0,1 mA. A simple circuit to do it is:

NOTE: don't use any pull up resistor on the ON# line, it is internally pulled up. Using pull up resistor may bring to latch up problems on the GE865 power regulator and improper power on/off of the module. The line ON# must be connected only in open collector configuration.

NOTE: In this document all the lines that are inverted, hence have active low signals are labeled with a name that ends with '#' or with a bar over the name.

TIP: To check if the device has powered on, the hardware line PWRMON should be monitored. After 900ms the line raised up the device could be considered powered on.

Ge865 Hardware User Guide
