

## SUSPENSION AND STEERING

### WHEEL ALIGNMENT

#### Description

Front wheel alignment is essential for proper vehicle handling and passenger safety. Front-end damage or replacement of any steering or front suspension component will require inspection of the alignment to determine if it is still within specifications.

#### CAUTION!

Never attempt to modify suspension or steering components by heating or bending.

#### Inspection - Pre-Alignment

The steering system should be inspected for wear. Any worn or damaged components must be replaced before checking alignment. The pressure of all four tires should be set to specification with a high quality tire pressure gauge, not the pencil type, before checking the alignment or performing a driving inspection. Customer complaints of poor handling or excessive front tire wear should be confirmed by a test drive. The test drive should be performed on a smooth level surface with plenty of room to maneuver.

Before starting wheel alignment, the following inspection and necessary corrections must be completed. Refer to Suspension and Steering System Diagnosis Chart below for additional information.

1. Inspect tires for size, air pressure and tread wear.
2. Inspect front wheel bearings for wear.
3. Inspect kingpins, linkage pivot points and steering gear for looseness, roughness or binding.
4. Inspect suspension components for wear and noise.
5. Road test the vehicle.
