

Gene Expression—Transcription

How is mRNA synthesized and what message does it carry?

Why?

DNA is often referred to as a genetic blueprint. In the same way that blueprints contain the instructions for construction of a building, the DNA found inside the nuclei of cells contains the instructions for assembling a living organism. The DNA blueprint carries its instructions in the form of genes. In most cases the genes direct the production of a polypeptide, from which other more complex proteins, such as enzymes or hormones, may be constructed. These polypeptides and other molecules run the organism's metabolism and, in multicellular organisms, dictate what each cell's job is. So, what is the language of these instructions and how are they read and decoded by the cellular organelles? This activity will focus on the decoding of genes in eukaryotes.

transport Carbohydrates provide energy for cells while lipids store energy and form cell membranes Nucleic acids DNA and RNA carry genetic information Another important area of biochemistry is metabolism Metabolic pathways involve a series of chemical reactions that allow organisms to obtain and use energy For instance cellular respiration is a metabolic process that breaks down glucose to produce ATP the energy currency of the cell Photosynthesis is another metabolic process that uses sunlight to convert carbon dioxide and water into glucose Biochemists also study the regulation of cellular processes This involves understanding how cells respond to signals and how they control gene expression By studying these processes researchers can develop new treatments for diseases such as cancer and diabetes Plastid Biology Steven M.

Theg, Francis-André Wollman, 2014-09-19 Plastids are the sites of conversion of solar energy into the chemical energy usable to sustain life They are also responsible for the production of the vast majority of the oxygen in the atmosphere Through these activities they play a unique role in the biosphere producing two critical products upon which life on Earth depends It covers in 21 chapters nearly all actively investigated areas of plastid biology from biosynthesis to function to their uses in biotechnology The editors have compiled an extensive list of international experts from whom to solicit chapters As is evident from the suggested Table of Contents the book will start with a discussion of genetic material and its expression followed by differentiation and development of different plastid types and internal organization This is followed by an in depth look at biogenesis and assembly of plastid proteins and protein complexes and then by the important metabolic functions in plastids The book will end with two chapters discussing the role of plastid biology in protein expression biotechnology and in hydrogen and biofuel production
