Evaluating New Telecommunications Services Martin C.J. Elton, William A. Lucas, David W. Conrath, 2012-12-06 This book contains the proceedings of the first international symposium devoted to research on the evaluation and planning of new person to person telecommunication systems It was sponsored by NATO's Special Programme Panel on Systems Science and took place in September 1977 at the University of Bergamo in the north of Italy Telecommunication systems which provide for communication between people rather than computers or other instruments are of two kinds There are mass communication systems broadcast radio and television and interpersonal systems for example the telephone and Telex which join together individuals or small groups Here we have included in the interpersonal category certain systems for retrieving information from computers essentially those systems in which the role of the computer is primarily to act as a store and to identify that information which best fits a user's request This excludes management information systems in which the computer performs important transformation functions Distinctions between interpersonal and mass communication systems and between these two and data communication systems are increasingly breaking down for those who provide the services In the U.K. broadcasters are piloting information retrieval services and the British Post Office is competing with a more sophisticated system which could also be used for the exchange of messages Elsewhere computer data networks are increasingly employed for the exchange of personal messages
