

Ignition and generator warning light (52)

The lamp glows red when the ignition is switched on and remains red while the engine is at idling speed. On accelerating, the light should go out, indicating that the generator is charging the battery.

Should the light fail to go out, or come on at normal engine speed when the car is traveling, the cause should be investigated without delay.

Headlamp main beam indicator (51)

A blue warning lamp on the instrument panel will illuminate when the headlamps are switched to main (high) beam.

**Heater blower switch (53)
(down the end
of column)**

An electric blower incorporated in the heating system increases the amount of air fed into the heater. The blower may be brought into operation when the car is stationary or travelling at low speed.

Interior courtesy lamp

The lamp will illuminate automatically when either door is opened, or it can be operated manually by pressing the switch on the lamp body.

Gear lever

The gearshift lever is floor mounted and the gear positions are indicated on the knob. Make certain that the lever is in neutral before starting the engine. Use first gear for starting off. The gear lever positions are illustrated on page 23.

Voltmeter (if fitted)

The voltmeter indicates the electrical system voltage under varying operating conditions.

1. With the ignition key in the anti-clockwise (auxiliary) position the pointer will indicate static battery voltage after a period of 45 seconds and should reach the minimum point along the scale corres-

ponding to the top part of the slope terminating section "A".

2. When the engine is running above idling speed, the pointer should move to the section "B" and remain there for NORMAL operation.
3. If the pointer remains in section "A" or "C" for any length of time with the engine running above idling speed a fault has developed resulting in insufficient or excessive battery charge and a Rover dealer should be consulted.

IMPORTANT: When the engine is running at idling speed the position of the pointer should be ignored, since voltmeter reading may vary at very low speeds due to the operation of the voltage regulator.
