Taunting the Useful Loumille Métros, 2024-08-06 In an epoch driven by hyper consumption and marvelously destructive futility and in the context of a

hegemonic utilitarianism where one goes to university to work rather than to develop a meaningful philosophy of life the concept of the useful is perhaps one most in need of interrogation Taunting the Useful seeks to unsettle notions of usefulness and uselessness not merely by deconstructing these terms but by sidetracking them It doesn't reverse things by saying that what is useless is useful Rather taunting is teasing heckling tickling scratching the useful By elaborating a notion of the virtual useless Taunting the Useful seeks to tease the dimensions of wonder use and play through modalities contingencies and potentialities of the useless useful An experimental book it un does what it tells and is as much an object taunting and taunted as it is a description of taunting the useful Includes bonus chapters

world of children's books should be without **Truly Human Enhancement** Nicholas Agar, 2023-09-19 A nuanced discussion of human enhancement that argues for enhancement that does not significantly exceed what is currently possible for human beings. The transformative potential of genetic and cybernetic technologies to enhance human capabilities is most often either rejected on moral and prudential grounds or hailed as the future salvation of humanity. In this book, Nicholas Agar offers a more nuanced view, making a case for moderate human enhancement: improvements to attributes and abilities that do not significantly exceed what is currently possible for human beings. He argues against radical human enhancement or improvements that greatly exceed current human capabilities. Agar explores notions of transformative change and motives for human enhancement, distinguishes between the instrumental and intrinsic value of enhancements, argues that too much enhancement undermines human identity, considers the possibility of cognitively enhanced scientists, and argues against radical life extension. Making the case for moderate enhancement, Agar argues that many objections to enhancement are better understood as directed at the degree of enhancement rather than enhancement itself. Moderate human enhancement meets the requirement of truly human enhancement. By radically enhancing human cognitive capabilities, by contrast, we may inadvertently create beings, post persons, with moral status higher than that of persons. If we create beings more entitled to benefits and protections against harms than persons, Agar writes, this will be bad news for the unenhanced. Moderate human enhancement offers a more appealing vision of the future and of our relationship to technology.
